MANUALIZATION™

Manualization™ is Hampco's proprietary philosophy to reduce your commercial exposure.

Is your equipment becoming too complex, unreliable, hard to maintain and expensive to own?
And, are you getting the support you need and value for money from the OEM?

- > Getting back to tried and tested basics in custom equipment design
- > Allowing customers to play key role in design and component selection processes
- > Offering equipment from a drilling contractor's perspective
- > Giving the operators greater control
- > Making equipment as mechanical and as easily maintainable as possible
- > Minimising automation
- > Providing manual back-up to any necessarily complex controls
- > Fully disclosing component information to allow direct spares procurement
- > Fully disclosing manufacturing materials to allow and simplify owner repair
- > Eliminating waiting time and ,high cost for OEM service engineers
- > Providing independence from OEM
- > Reducing equipment downtime
- > Guaranteeing against equipment obsolescence through "design in escrow"

Empowering the industry to take control with Optimised Equipment Made simple
Reducing equipment lifetime cost of ownership

MANUALIZATION™ = KNOWLEDGE = INDEPENDENCE = LOWER COSTS
