Seedsmen Leading the World

INNOVATIVE GENETICS

SMITH'S GOLD

First Gallagher progeny with better leaf hygiene, later pull-off date, and improved baking quality as verified by Wheat Quality Council. Resistant to Hessian fly, greenbug. Improved resistance to stripe rust over Gallagher. **GrazenGrain™**

STARDUST

Newest hard white variety best adapted to north central Oklahoma and south central Kansas. Sprout resistance, disease package fit for this region. Medium early maturity, good resistance to stripe rust, excellent straw strength. Good milling and baking quality verified by Wheat Quality Council.

SPIRIT RIDER

First OK Bullet progeny with same standability but shorter plant height. Best fit for intensive management programs that depend on straw strength to elevate yields. Resistant to stripe rust, moderate resistance to leaf spotting diseases, acid soils. Excellent milling and baking quality verified by Wheat Quality Council.

LONERIDER

Ideal blend of genetics from Duster, Billings, Eastern Europe germplasm. Widely fit for Western Plains. Standability and short stature good for maximizing irrigated yields. Early maturity.

Acid-soil tolerant. Very large kernel size. Good end-use quality at target HRW protein levels.

BENTLEY

Yield stability in drought-stressed environments. Good forage production and later winter dormancy release with medium heading. Wide adaptation through Central Plains. Excellent baking quality verified by Wheat Quality Council. **GrazenGrain™**

TRUSTED GENETICS

GALLAGHER

Most widely planted variety in Oklahoma – superior fall forage production and grain yield. Broad disease package, centered on leaf rust and stripe rust. Resistant to Hessian fly. Acceptable milling and baking quality verified by Wheat Quality Council. **GrazenGrain™**

DOUBLESTOP CL+ (improved 2016)

Standard for two-gene Clearfield® wheat in the Central Plains. Combines high yield, test weight, resilience, and show-wheat quality in one variety. Competitive canopy. Acid-soil tolerant. Stripe rust resistant. Affirmed by Wheat Quality Council. **GrazenGrain™**

IBA

Sister variety to Gallagher with same yieldability, but better fitness to High Plains. Good fall forage production. Drought resistant and widely adapted. Excellent baking quality confirmed by Wheat Quality Council. Maintains dough strength at lower protein content. **GrazenGrain™**

RUBY LEE

Exceptional grazeability, with high yield potential across Central and Eastern Plains. Hessian fly resistance (temperature-sensitive). Large kernel size. Show-wheat quality. Local check used for Wheat Quality Council testing. **GrazenGrain™**

DUSTER

Gold standard for OSU **GrazenGrain™** varieties. Historically, the most widely-grown variety in OK since its 2006 release. Four-gene package still provides resistance to leaf rust. Resistant to Hessian fly, powdery mildew. Resilient under BYD pressure. Good baking quality verified by Wheat Quality Council.
