KONDEX KX7 CONCAVES

Your harvest goals may differ from your neighboring farm or those thousands of miles away. KX7 offers diverse solutions to overcome many common harvest-time headaches. You've invested a lot in planting and cultivating your crops. Don't risk an inferior return by using an inferior concave.

-Combating rotor loss is one of the biggest ways to improve your grain profit, and KX7 is your best source for preventing losses! It is statistically impossible to completely eliminate rotor loss, but we can get you as close as possible. With KX7, losses have been consistently at less than a half percent of the field average yield (<0.5%) across multiple crops, far less than traditional and alternative concave options. This is possible due to the improved up-front threshing that allows for more separation time. The KX7 design also greatly decreases plugging, which is a main contributor to rotor loss.

-Poor separation causes trouble for farmers in many crops, particularly corn and soybeans. With KX7, you can stop worrying about delays or losses from plugging and focus on getting additional acres done. This is true not only in ideal conditions, but also in high-moisture crops. A KX7-equipped combine is an efficient and productive combine, thanks to our improved design.

Max Thresh
Box™

Max Round
Box™

KX7 has the ability to move boxes around for certain threshing conditions.

Please Call For Availability.
PRICES SUBJECT TO CHANGE WITHOUT NOTICE!

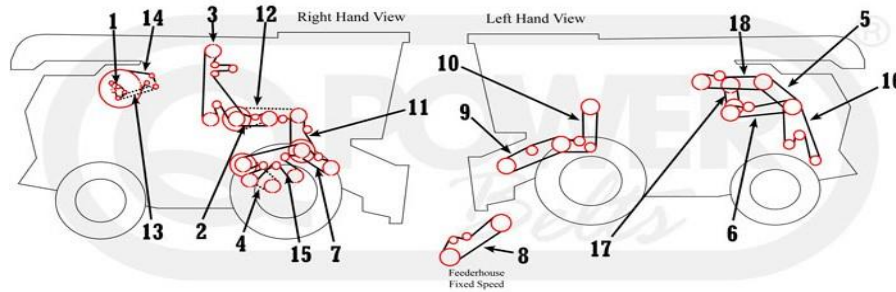

By having the round bars staggered from each other a disruption occurs keeping the concaves from plugging.
