

Acrylic *inlaid and applied*

The Acrylic processes are the most economical and basic solutions for ADA compliant signage. Manufactured with UV stable, colorfast acrylic, these signs are suitable for interior and exterior applications.

The Applied process utilizes state-of-the-art computer precision engraving to produce raised characters and graphics. The Braille is embedded directly into the sign face using the patented Raster Braille process.

Features

- UV stable and colorfast acrylic
- Standard Rowmark and custom back painted colors
- ADA Complaint, Grade 2 domed Raster Braille

The Inlaid process utilizes the same technology to produce raised characters and graphics which are then embedded into the surface through an additional process to offer superior vandal resistance. The Braille is embedded directly into the sign face using the patented Raster Braille process.

Features

- Vandal resistant, embedded characters and graphics
- UV stable and colorfast acrylic
- Standard Rowmark and custom back painted colors
- ADA complaint, Grade 2
