

## Wave Passport RFID System

### Making Waves with RFID

Passport Technologies worked extensively with RFID and automated control technologies prior to entering the access management industry in 2006. This expertise has enabled Passport Technologies to design and develop the ultimate solution to optimize client access management at your facility, the **Wave Passport System**.

### Simplicity, Security, Sustainability

Passport Technologies Wave Passport systems are designed for ease of installation and integration with your cloudbased membership management platform, as well as to simplify and optimize the facilities access process for your customers.

Wave Passport systems leverage the enhanced automatic identification features provided by RFID technology to deliver improved client and facilities security while reducing fraud. Unlike other access management technologies, the RFID chip inside Wave Passport keyfobs and cards cannot be photocopied, reproduced or modified in any way.

Though all Passport Technologies products are designed for high traffic applications, Wave Passport fobs and readers are fully encapsulated to ensure maximum durability, optimal functionality, and reduced lifecycle costs. RFID is a sustainable technology deployed across countless industries around the world.

Access Management  
*Simplified!*

Passport Technologies is an integrated manufacturer and supplier of electronic automatic identification products and services based in Richmond Quebec. With over 15 years experience in the automatic identification industry, we offer state-of-the-art solutions designed to help health and fitness businesses improve their operations and security while reducing fraud.

Whether you are looking to install a fully integrated cloud-based access management system or a single turnstile, Passport Technologies has the products and the expertise to improve the access management of your operations as well as the front reception experience of your members.
