NON-DISRUPTIVE EXPANSION

Introducing the  
Concept of

# Spatial Elasticity<sup>©</sup>

*“Infinitely configurable, timelessly adaptive, and infinitely re-configurable — re-locatable.”*

Introducing iFortress' Adaptive Design/Spatial Elasticity<sup>©</sup> approach to engineering your mission critical facility based on your needs now without limiting your ability to accommodate whatever they may be in the future. An engineered solution that expands and/or contracts with your needs as the spatial dynamics of your technology footprint and requirements evolve without ever once compromising the integrity, efficiencies, or security of the functioning facility. From location to size and configuration, iFortress provides total flexibility to modify the IT footprint at any time and in virtually any direction in two-foot increments.

*iFortress enables your organization to adapt its existing facility in record time without disruption.*

iFortress allows for complete dimensional optimization and gives you the ability to match your spatial footprint with your current needs and technology base. Thus maximizing its operational efficiency while minimizing capital outlay. Unlike any other alternative, iFortress can be easily dismantled, re-sized and even relocated as required. This unparalleled flexibility has revolutionized long-term planning for critical IT infrastructure.
