

Scientific Conservation Board

Those who sit on our Scientific Conservation Board are driven to understand raptors and what threats they can face in the wild. This group corresponds primarily through email and looks at what is impacting raptors and designs and executes plans to further the research into raptors.

This Board is given the chance to work together utilizing volunteers and the Wind River Raptor permitting to allow research and advancement in the field of raptor science.

Below is list of some of the things our Scientific Conservation Board is doing.

- Prerelease training study for Golden Eagles
- Lead toxicity protocol redesigned
- Nest site surveys
- Raptor trapping and banding
- Monitoring migration pattern and timing
- Monitoring of nesting sites for species under threat
