SikaFibre®
Polypropylene Fibres for Concrete

Description
SikaFibre is high quality micro monofilament polypropylene fibres. It is designed to minimize and control plastic shrinkage cracks in concrete. SikaFibre is available in pre-measured, ready to use degradable bags for 1 m³ of concrete.

Use
SikaFibre reinforces fresh concrete and reduce the incidence of shrinkage cracking in pre-hardening stage.

SikaFibre is used in:
- Slabs
- Pavements
- Precast concrete products
- Heavy-duty industrial floors
- Overlays
- Shotcrete
- Mortar screeds and plasters

Note: Polypropylene fibres are not intended to replace reinforcement steel.

Advantages
Thanks to their fineness and special-surface treatment, SikaFibre is uniformly distributed to provide internal reinforcement to:
- Reduce plastic shrinkage cracking
- Improve fresh concrete cohesion
- Improve impact and abrasion resistance
- Improve concrete durability

Instructions for Use
Put 1 (one) bag of 0.6 kg SikaFibre per m³ concrete directly into the mixture. A mixing time of 3 to 5 minutes is necessary to ensure that the bag is fully degraded and ensure uniform fibre dispersion throughout the mix.

SikaFibre is compatible with all Sika admixtures. The standard procedures for placing, finishing and curing concrete shall be followed. In addition, proper reinforcement and joint spacing should be observed.
