2 TENANT SUITE - LIFE SAFETY PLAN
Scale: 1/8" = 1'-0"

General Notes

- 1) See cover sheets for more detailed building code information. The purpose of the fire and life safety drawings is to illustrate in schematic fashion, the applicable exiting, fire-resistance, and life safety concepts utilized by this project; including, but not limited to:
- Occupancy classifications
- Occupancy load factors
- Exit locations, exit paths & capacity
- Function of space
2) Additional detailed requirements apply to the construction of partitions, fire rated door assemblies, interior glazed. Openings, ducts, smoke and fire dampers and through penetration fire stopping. Refer to the drawings of each discipline and the project manual for these requirements, if applicable.
3) Additional detailed requirements shown elsewhere may require construction having greater fire ratings, more extensive fire-rated construction, or more complex assemblies than indicated. When provided, the additional detailed requirements shall govern.
4) Fire barriers shall extend from the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, slab or deck above and shall be securely attached thereto. Such fire barriers shall be continuous through concealed spaces.
5) Where applicable, shaft enclosures shall be constructed as fire barriers.
- 6) Where applicable, fire partitions shall extend from the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, slab or deck above or to the fire-resistance-rated floor/ceiling or roof/ceiling assembly above, and shall be securely attached thereto.
7) Where applicable, smoke barriers shall form an effective membrane continuous from outside wall to outside wall and from the top of the foundation or floor/ceiling assembly below to the underside of the floor or roof sheathing, deck or slab above, including continuity through concealed spaces.
8) Where applicable, smoke partitions shall extend from the top of the foundation or floor below to the underside of the floor or roof sheathing, deck or slab above or to the underside of the ceiling above where the ceiling membrane is constructed to limit the transfer of smoke.
9) Where applicable, directional signage shall be provided at each elevator landing and state the following: "In fire emergency, do not use the elevator. Use exit stairs."
10) Interior wall & ceiling finishes shall have a flame spread index rating of no more than class b at vertical exits & exit passageways and exit access corridors and other exit ways.
11) Interior wall & ceiling finishes shall have a flame spread index rating of no more than class c at rooms and enclosed spaces.
12) All materials exposed within ducts or plenums shall have a flame spread rating index not more than 25 and a smoke developed rating of not more than 50.
- 13) Fire extinguishers shall be located such that a maximum travel distance of 75' shall not be exceeded (where required by code).
14) Level/ area main occupancy exit sign locations may not be shown. Reference electrical sheets for all exit sign locations.
15) Fire resistive assembly details, if applicable, are located elsewhere in this drawing set per the sheet index.
16) Where applicable, elevator hoist way openings shall be protected as required by the code, corresponding to the rating of the hoist way.
17) Every assembly occupancy room or space shall have the occupant load posted in a conspicuous place.
18) Structural elements, fixtures or furnishings shall not project horizontally from either side more than 4 inches over any walking surface between 27 inches and 80 inches above the walking surface. Exception: handrails serving stairs and ramps are permitted to protrude 4 1/2 inches from the wall.
19) The path of egress travel exits and within exits in this building shall be identified by exit signs conforming to the requirements of section 1011 and as noted below:
a) exit signs shall be readily visible from any direction of egress travel.
b) exit signs shall be located as necessary to clearly indicate the direction of egress travel.
c) No point in a corridor shall be more than 100 ft or the listed viewing distance for the sign, whichever is less, from the nearest visible exit sign.
20) Egress doors or gates shall be openable from the egress side without the use of a key, special knowledge or effort. Door handles, pulls, latches, locks and other operating devices shall be installed 34 inches to 48 inches above finished floor. Manually operated flush bolts or surface bolts are not permitted. The unlatching of any door or leaf shall not require more than one operation.
