JONESTOWN POLICE DEPARTMENT	Page 3	Case No. 11-014356
		Type: Offense
Crime / Incident (Primary) 28.03 PC Criminal Mischief	Attempt <input type="checkbox"/>	Narrative Report

On the morning of June 22, 2011 I met with Charles Malouff the Director of the wind energy program that the City of Jonestown is operating under a Federal Grant and in conjunction with CM Energies. Mr. Malouff stated that there had been a number of incidents over the past 45 days that have led him to believe that someone may be trying to sabotage the wind energy project.

Mr. Malouff explained that about a month or so ago one of the wind turbines located on the Waterscape Property (Live Oak St.) was found to have been tampered with. The way the turbines are designed they will only turn in one direction. They have been well designed and tested in coordination with the University of Texas and they have been wind tunnel tested. It is not physically possible for the wind turbine to spin backwards as it would violate the laws of physics, yet this turbine had been turned backwards and unattached from its mounting base. One of the Lexan blades approximately 10 tiers up had also been broken. This was also very suspicious because the blades are constructed of 1/4" lexan and are virtually unbreakable.

A second suspicious incident occurred on June 1, 2011 when someone walked into Jonestown Wind Project Office and stole laptop computer. This incident occurred in broad daylight during lunch time and the only thing taken was that one laptop. (Case # 11-014197) There was a lot of valuable information concerning the program on that laptop.

The third suspicious incident concerned his personal motorcycle. He stated that he had taken his motorcycle into a dealership for service and he got a phone call from the mechanic asking him if he had any enemies because someone had apparently tampered with the front tire of his motorcycle. When Mr. Malouff went to the dealership they showed him the front tire of his motorcycle where someone had apparently taken a very sharp object and cut two slices in the front tire, each being approximately 10" long and 1/4" deep. This could have easily have caused the front tire to blow out if the bike was taken to highway speeds and expanded. The result would have been a loss of control of the bike and possibly a serious accident. Mr. Malouff stated that the only place that this damage could have possibly taken place was at his residence on Lafayette Park Drive here in Jonestown. This was especially problematic because virtually no one knows where he lives.

This morning when they went to inspect the turbines after last night's thunderstorms, they found that two of them were damaged. One of them was broken at a shaft joint and a lexan blade was cracked. A second turbine was broken with one of the blades about 10 tiers up broken and shattered into about 40 pieces. This type of shattering was uncharacteristic of lexan and the damage that was observed was not caused by the wind as the winds experienced during the storm were well within the tested abilities of the turbines. According to Mr. Malouff the only way the blade could be shattered in that manner was for one or two people to climb up and hang from the blade and twist it to cause it to shatter. Also found on the ground was a white hard hat that was nothing like the ones worn by Jonestown employees or those of CM energies. The hard hat had the name "King" written on the inside and based on the dirt on it, it had been at the scene through the rainstorm.

The last time that the turbines were for sure intact was about Friday 6/17/2011. Mr. Malouff states that there are of people that would like to see this project to fail including some previous employees and also a group from Leander who is in litigation with the City over patent rights on the wind turbines.

Crime / Incident (Primary) 28.03 PC Criminal Mischief	Attempt <input type="checkbox"/>	Narrative Report	

The hard hat was taken into possession to be processed as evidence. Arrangements were alos made to have a uniformed officer meet Mr. Malouff at the turbine site to gather evidence and further document the area.

Case No. **11-014356**

Reported 07/19/2011 09:15 Tuesday

Title: *Follow-up*

On July 15, 2011 at about 0930 I received a phone call from Mr. Charles Malouff concerning some damage that had occurred to the wind turbines that are part of the C.M. Energies wind project. Mr. Malouff stated that he believes that he now has evidence as to how the one turbine was damaged to the point that it came apart at the joint. Charles asked me if I could meet him at the wind turbine site on Live Oak and he would show me what he was talking about. I informed him that I was tied up at that point but that I would meet him up there at the site after 1:00 pm and that I would call him when I was on the way there.

At about 2:00 pm, I called and told Mr. Malouff that I was enroute to the wind turbine site and he told me that he would meet me there. I arrived at the site a few minutes later and Mr. Malouff arrived shortly thereafter. Charles directed me to the one turbine that had been broken off. We then looked through the space where the air conditioner would normally be placed and he showed me that there was a piece of plastic strap that he referred to as "mule tape" wrapped around the base of the turbine's aluminum shaft and there was a piece of rope similar to clothes line attached to the strap and hanging down. Mr. Malouff stated that it appears that the rope had been tied on and then put out through the air conditioner window and then tied to base of the support structure. There was some scratching on the base where the rope may have been attached. According to Mr. Malouff this would have prevented the turbine from turning and thus in high winds like we had when the turbine was broken it may have resulted in the observed damage. Photographs were taken on the strap, rope and frame scratches for enclosure in the case file.

We inspected the other turbines in the area but no similar attachments were found.
