DATA SHEET

Rabbit Anti-Tau Phosphorylated Ser396/p-Tau S396 [EPR2731]: RM0257, RM0257RTU7

Intended Use: For Research Use Only

Description: Tau is a heterogeneous microtubule-associated protein that promotes and stabilizes microtubule assembly, especially in axons. Six isoforms with different amino-terminal inserts and different numbers of tandem repeats near the carboxy-terminus have been identified, and tau is hyperphosphorylated at approximately 25 sites by ERK, GSK-3 and CDK5. Phosphorylation decreases the ability of tau to bind to microtubules. Neurofibrillary tangles are a major hallmark of Alzheimer's disease and these tangles are bundles of paired helical filaments composed of hyperphosphorylated tau. In particular, phosphorylation of Ser396 by GSK-3 or CDK5 destabilizes microtubules in Alzheimer's disease.

Specifications

Clone:	EPR2731
Source:	Rabbit
Isotype:	IgG
Reactivity:	Human, mouse, rat
Localization:	Cytoplasm
Formulation:	Antibody in PBS pH7.4, containing BSA and ≤ 0.09% sodium azide (NaN3)
Storage:	Store at 2°- 8°C
Applications:	IHC, ELISA, IF, IP, WB

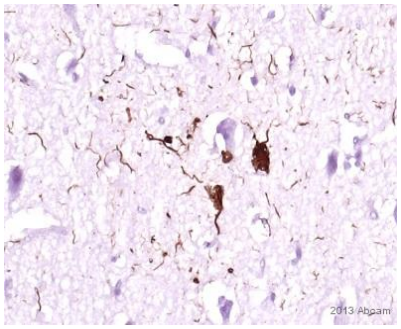
Package:

Description	Catalog No.	Size
Tau Phosphorylated Ser396/p-Tau S396 Concentrated	RM0257	1 ml
Tau Phosphorylated Ser396/p-Tau S396 Prediluted	RM0257RTU7	7 ml

IHC Procedure

Positive Control Tissue:	Human Alzheimer brain
Concentrated Dilution:	100-300
Pretreatment:	Citrate pH6.0 or EDTA pH8.0, 15 minutes using Pressure Cooker, or 30-60 minutes using water bath at 95°-99°C
Incubation Time and Temp:	30-60 minutes @ RT
Detection:	Refer to the detection system manual

* Result should be confirmed by an established diagnostic procedure.



FFPE human Alzheimer hippocampus stained with anti- p-Tau S396 using DAB
