How Was The Warren Lift Concept Developed?

Warren Hoffman
Inspiration for the Warren Lift

The initial Warren Lift concept originated with Warren Hoffman's son Mike. Warren never wished to move to a nursing home and clearly stated this to his family. Unfortunately, after a serious injury made in-home care impossible, Warren's family was forced to consider alternatives. At 6'3" tall, Warren required two people to help him reach the bathroom and use a standard height toilet.

Mike knew that if Warren had a toilet with the capacity for adjustable height, he may have had more personal freedom and a better overall quality of life. Thus, the concept for an adjustable height toilet: The Warren Lift was born.
