

HASELOH INNOVATIONS

C46 and C66 Arrow Alternator Kit

Add 12-volt power to your Arrow C46 or C66 style pump jack engine with the **HASELOH INNOVATIONS** alternator Kit. A precision laser cut steel bracket bolts directly to the engine bell housing using existing bolts and holes.

The Alternator Kit is a completely bolt on solution. No modifications to the engine are required! An 11" billet aluminum pulley bolts directly to a Browning SF or E style hub and provides a 5 to 1 speed increase.

At 500 engine RPM, the alternator will efficiently generate 80 amps of 12-volt DC power. This power can then be used to run an Inverter and battery system to power heat trace, or heaters to stop tanks from freezing

In development

A Brushless 100 Volt DC motor to be installed in place of the 12 Volt Alternator to directly power 110 Volt AC heat tape without the need of Power invertors or batteries.
