

Superbike Brake Line Kits

Superbike Series brake line kits have been used by top AMA pro teams for years. They provide better lever feel and increased response by threading directly into the caliper instead of using conventional banjo bolts. These proprietary superbike fittings allow for -2 feel, with the volume of a -3 hose. They are designed for closed-circuit racing due to their powerful and aggressive braking. Superbike lines come complete with hardware, adapters, crush washers and bolts, as well as a lifetime warranty.

- Stainless steel brakes lines increase power, feel, and prevent brake fade when compared to OEM rubber hoses due to their lack of line expansion.
- Made with premium fittings and 64-count stainless braided hose with a PTFE62 DuPont Teflon© liner.
- Made in the USA
- Superbike thread-in-adapters should be torqued to 12-13 ft/lbs
- Superbike 90 degree flare unions should be torqued to 6.5 ft/lbs and checked on a regular basis.
- Brake line tech support available at (209)923-4684.
