

### Sign-in Roster ASCE-SIS Meeting

|                                                                     |                                                                                                                    |
|---------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| Date: 04/17/24<br>Location: BSU Berquist Lounge<br>Duration: 1 hour | Presenter: Mir Tamim, PE<br><br>Topic: <b>Unveiling Idaho's Approach to Pavement Asset Management: An Overview</b> |
|---------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|

**Description:** Pavement Asset Management (PAM) is a critical component of modern transportation systems, ensuring the durability, safety, and cost-effectiveness of road networks. This presentation will highlight the Idaho Transportation Department's (ITD) PAM practices, focusing on key principles and methodologies to optimize pavement performance. Emphasizing proactive maintenance, ITD's approach involves timely interventions guided by data analysis to prevent deterioration and costly reconstruction. ITD's robust PAM system integrates engineering and economic analysis, facilitating complex decision-making processes for effective infrastructure management.
