

Improved Energy Star Score Within 6 Months

Old boiler (before ECM implementation)

New Boiler (After Design & Installation)

Within **six (6)** months of implementation the design and recommendations the energy star score has been improved. The building installed new modular boilers to save part load hours & converted from oil#4 to oil#2 and got the result, still the building energy improvement is on progress. We believe the energy star score will improve more when the building will complete other recommendations.

NYBSC Works:

- i) Energy Audit & Retro Commissioning
- ii) Engineering Design for Boiler Replacement
- iii) Project Management
- iv) Local Law 87
