sided display

OPTION:  
Front, left or right  
handed nozzle  
holster

OPTION:  
Automatic nozzle

Stainless  
steel cabinet

Removable  
side panel

4m hose

External base mounting holes

The HYTEK AdBlue® ALPHA pump features the same stainless steel, rust free cabinet & many other parts as the best selling diesel version. However, it uses a specialist meter & other components so it is 100% compatible with AdBlue®.

The ALPHA heavy duty AdBlue® pump is available in two versions, one has a pump unit inside whilst the alternative dispenser option is fed via a submersible pump. This is already fitted inside the storage tank.

**Pumping Speed:** The pump unit version pumps up to 30L/min, whilst the dispenser version can dispense up to 100L/min (depending on the type of submersible pump you have fitted in your tank.)

**Accuracy:** +/- 0.5%.

**Display:** Single sided electronic display shows up to 99,999.9 litres, the electronic totaliser keeps an ongoing total of fuel used up to 99,999,999 litres. Dual sided display optional.

**Nozzle Operated:** No switches, levers or handles to operate or break. Simply remove the nozzle & the pump starts, replace & the pump stops. Next time you remove the nozzle the display resets.  
**(Nozzles not included, choose the make you prefer).**

**Key/Card System Interface:** All versions can easily be interfaced with most existing or new key/card fuel management systems as a 10:1/100:1 pulse transmitter is fitted as standard.

**Cabinet:** Modern robust cabinet, completely stainless steel to prevent corrosion. Individual parts can be replaced in the unfortunate event of accident damage.

**Easy to Maintain:** Good access for service engineers allows for easy & quick maintenance.  
(Speak to your distributor for maintenance schedule/contract)

**Supplied With:** Outlet hose.

**Compatibility:** Use to dispense AdBlue®.

**Options:** Automatic shut off nozzles, breakaway couplings & hose retractors. Ask for full list.

NOT CURRENTLY SUITABLE FOR RESALE.

PLEASE NOTE: IF MORE THAN ONE DISPENSER IS FED VIA THE SAME SUBMERSIBLE PUMP, A SOLENOID VALVE MUST BE FITTED TO PREVENT UNAUTHORISED USE.
