

Trailer Barn Door Holdback

It can only be used one way, the right way!

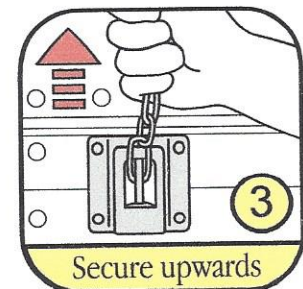

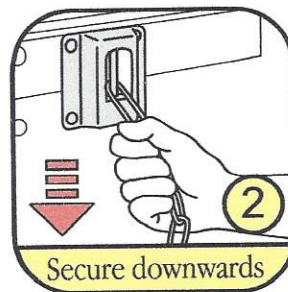

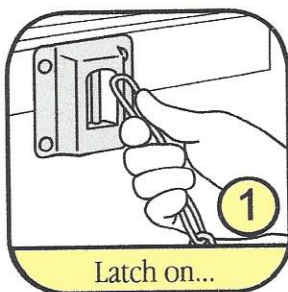

Fast, Easy, SECURE!

EXTRA HEAVY DUTY!

THE STORY OF **Latch-It™**

Our engineers were asked to design a barn door holdback which could not be misused, like many on the market. The result was **Latch-It™** which can only be used one way, the right way!

- Pin will not bend.
- Will not lift off and self detach
- Cannot be misused.

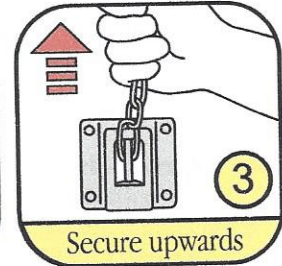

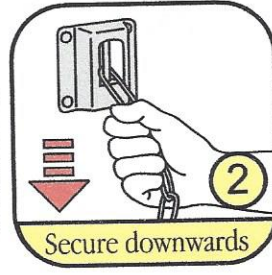

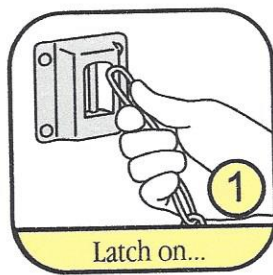

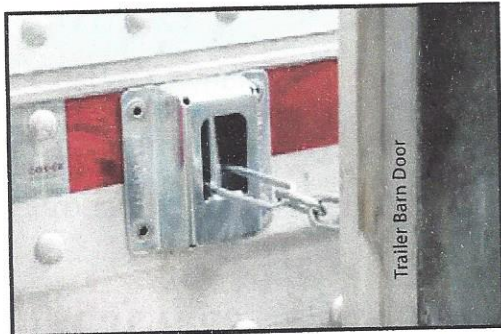

- Reduces empty haulbacks due to damaged doors.
- Plated for rust protection.
- Made tough, in Canada. Sold worldwide.

NEW PRODUCT INFO.

NEW - Latch-It™

TRAILER BARN DOOR HOLDBACK

It can only be used one way, the right way!

Repair costs to a broken barn door, resulting in an empty back haul, are often the result of a failed hold back.

A large North American semi trailer manufacturer asked us to design a hold back "which was impossible to misuse" and where the holding pin would not bend, or the chain lift off.

The result was the recently patented **Latch-It™**.

When pulled from any direction, it will not self detach.

It can only be detached by the driver.

Plated to protect from rust and built to last, it can only be used one way, the right way!

Latch-It™ is sold both in bulk, and individually, in a retail pack.
