## Guiding Principal and Principles

'It is, in fact, nothing short of a miracle that the modern methods of instruction have not yet entirely strangled the holy curiosity of inquiry; for this delicate little plant, aside from stimulation, stands mainly in need of freedom; without this it goes to wreck and ruin without fail.

It is a very grave mistake to think that the enjoyment of seeing and searching can be promoted by means of coercion and a sense of duty. To the contrary, I believe that it would be possible to rob even a healthy beast of prey of its voraciousness, if it were possible, with the aid of a whip, to force the beast to devour continuously, even when not hungry, especially if the food, handed out under such coercion, were to be selected accordingly'.

## ForeWord

[2020]

This discourse involves an interdisciplinary review of the '*unconscious*' [mind], '*creativity*' and '*writing*'. The express objective is to demonstrate that writing is a natural interdisciplinary dynamic system - NIDS<sup>©</sup> - therefore, governed by the natural laws of physics and not by '*artefactual*' disciplinary constructs e.g. (English) '*composition theory*'. In so doing, we hope to free writing from its falsely imprisoned, constraining and creativity-killing disciplinary ['English Department'] status and (re)establish '*writing per se*' as a dynamic interdisciplinary intercommunication system within and outside of the Academy.

### Operative Key Words, Phrases and Connectives

Interdisciplinary; creativity; writing per se; natural; dynamical system; domain; laws of physics; artefactual; disciplinary constructs; intercommunication system; mind; brain; psyche; psychical; unconscious; collective unconscious; preconscious; conscious[ness]; imagination; intuition; insight; instinct; innate; ideation; chaos; complexity; linear; nonlinear; grammatology; word; word cluster; connective; normative; systems theory; systemic; dynamics; mechanics; quantum; matter; mass; weight; density; force; energy; kinetics; degrees of freedom; synergy; synergetics.
