

ProTVSolutions

MTI2CEC Converter *for Hospitality*

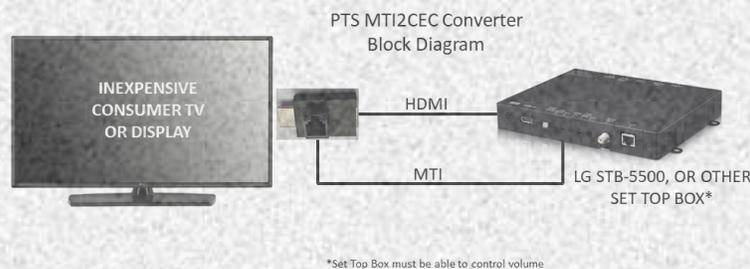

Easily Connect a Consumer TV to your Hospitality Video System

Part# - PTS-MTI2CEC Converter

ProTVSolutions designed a simple MTI to CEC interface that can easily be installed between a hospitality Set Back Box, such as an LG STB-5500, and an inexpensive consumer TV. It allows the Set Back Box to control the TV using standard MTI commands. This would allow the standard remote control to turn On and Off the TV and provide feedback to the video system that the TV is either on or off.

Key Features:

- Provides the required communication for a consumer TV to work in a hospitality environment
- Hospitality TVs may be too expensive for some regions or businesses
- Hospitality TVs may not be available in larger sizes or the feature set required.
- No power supply required
- Thousands have already been installed in hotels across the country

**Plugs Directly into
TV's HDMI Port**

Key Requirements:

- TV must support CEC communication.
- Set Top Box must internally control Volume and mute operations
- Set Top box must support MTI communication, and have an HDMI output
