

The world leader in water and rope rescue education since 1979

“Rescue from Vehicles in Water”

June 15, 2024

Wisp Whitewater

Center

McHenry, MD

Rescue 3’s specialized workshop for Swiftwater Technicians explores the skills required to deal with rescues from vehicles in water. Using purpose-designed in-water training vehicles in a controllable water flow at one of the nation’s premier whitewater parks. **The Rescue 3 Northeast Instructor cadre is the only training provider in the country to deliver a realistic approach as we operate from daylight into nighttime conditions.** This course looks at vehicle behavior and stabilization in water, as well as access techniques, multiple rescue options, and single victim to multiple victim extrication techniques. Rescues from vehicles in water are a growing hazard faced by fire & rescue services. While generic swiftwater rescue technician skills and techniques can be utilized for these rescues, current training does not provide realistic and specific exposure to these incidents. Don’t let yourself or your team miss this realistic training.

Course: 1000- 2000 hrs. - Tuition: \$325.00

Prerequisites: Swiftwater Basic

Personal Equipment: Personal flotation device (PFD), Full dry suit or wetsuit, Thick-soled water booties or sneakers, Water rescue helmet and gloves.
