Location / Directions: Please see attachment "Meeting Location"

Internal Replacement Solutions for Pressure Pipes and Force Mains

Eric Foster
Account Manager, NPA Construction

This presentation will describe the internal replacement solutions for rehabilitating pressure pipes and force mains as an alternative to trenching and pipeline replacement. These trenchless technologies can provide 40% to 70% cost savings per mile of pipeline repaired over traditional excavation or cut-and-replace pipe rehabilitation techniques. The featured trenchless technologies will include UV light-cured sewer liners, spiral-wound pipe for lining sewers and drains, and NPA Construction's internal replacement solutions for water and sanitary pipeline rehabilitation projects. The presentation will include video clips of various pipe rehabilitation technologies.

Eric Foster is Account Manager at NPA Construction, a firm that specializes in trenchless pipe rehabilitation using Primus Line, BKP Berolina, and SWP Systems technologies. He has worked over nine years in the oil, gas, and utilities industries, providing environmental and industrial services for pipeline, tank, and facilities maintenance. He has over three years of experience in trenchless internal replacement solutions for aging pipelines in these industries. He has numerous contacts with contractors providing these services throughout North America. Mr. Foster earned his MBA from Cal State Long Beach in 2008, and a B.A. with honors in International Relations specializing in World Trade from U.C. Davis in 1998. He is fluent in Spanish and French, and has working knowledge of Portuguese, Arabic, and German.
