

GIZA PLEIADES STAR MAP 2

The purpose of this illustration is to suggest that the core of the Giza pyramids incorporates the Pleiades star cluster layout. In turn this specific Pleiades motif is from the composition as seen on Cydonia, in Mars. The star *Electra* corresponds to the southeast corner of the Great Pyramid and so on. What is also amazing is that the various other lesser structures of the Martian pyramid complex are replicated at the Giza Plateau. For example, next to the Face of Mars is a prominent oval structure with 4 smaller ovals at each corner. This structure on Mars is also correlated next to the oval depiction on Giza's version of the Face of Mars. Next to the Pleiadian Pyramid city to the north is a structure and to the northeast of it are 2 other pyramid shaped structures. One is a sort of circular triangle adjacent to another 'heart' shaped triangle-like structure. The following are some approximate measurements taken from GoogleEarth coordinates. These 3 structures on Mars are replicated to the north of the Great Pyramid is the same general outline. There is also a massive structure in-between the Pyramids of Giza and the area corresponding to the Pentagon Pyramid greenery patch of land.

PYRAMID CITY

180° inversion / ~72° rotation

CYDONIA, MARS

40°44'33.60N 09°

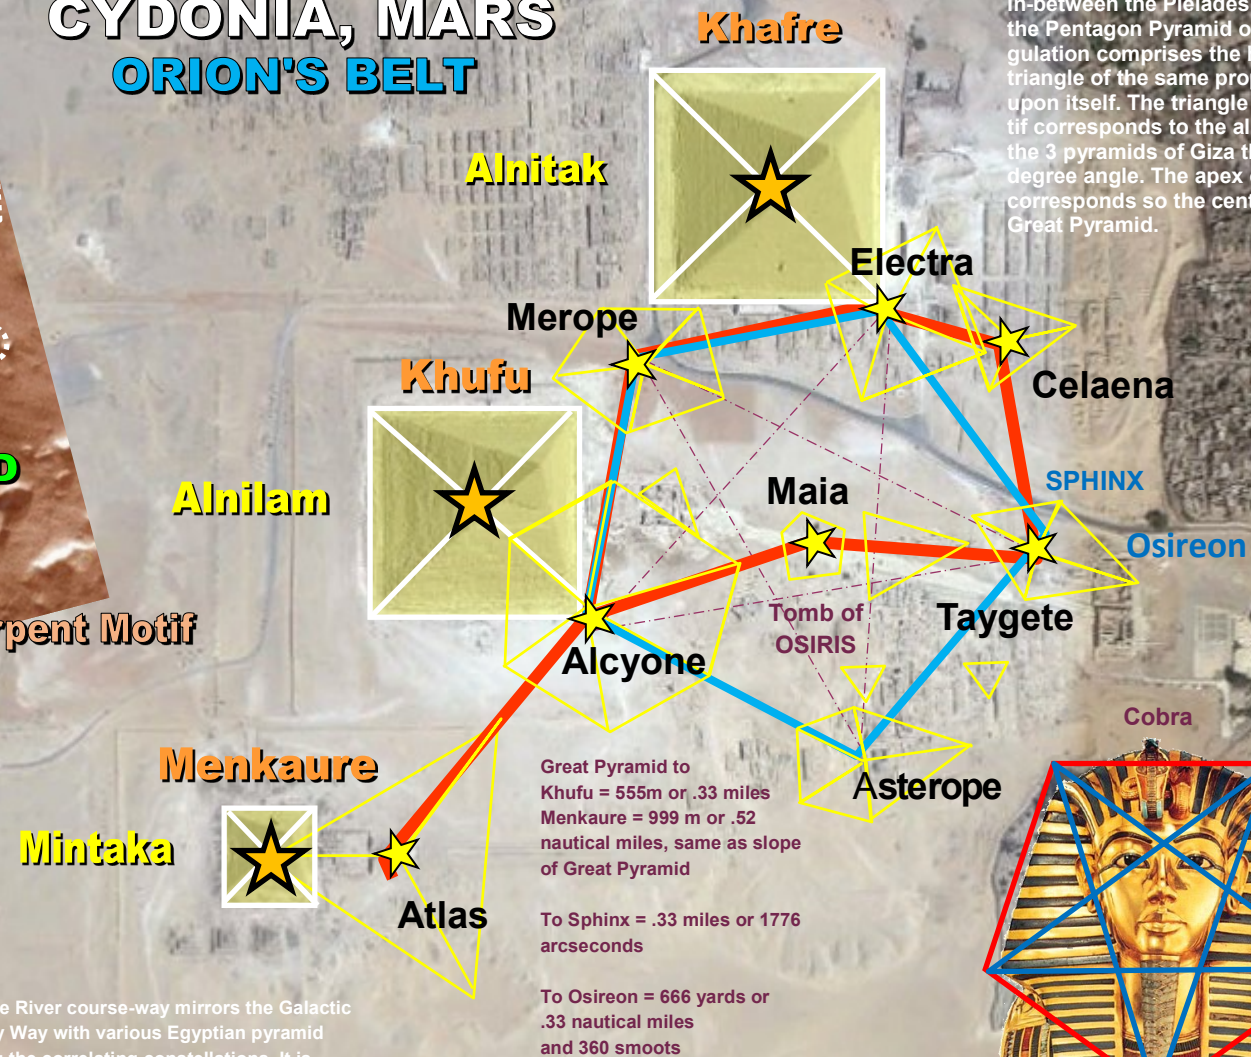

FACE OF ALA-LU

D&M PYRAMID

Serpent Motif

The hexagram motif construed at Giza is a bit elongated but this provides a proportion that incorporates the 'Serpent' motif that is also found in many of the other sites around the world in some form or fashion. In most cases it was a river that construed this motif. In modern times, such Martian motifs have freeways or avenues that depict this 'Serpent' weaving within the 'hexagram'. In the case of Giza, the 'Serpent' motif corresponds to the span of the bases of the 2 triangles that construe the hexagram from a top view. The starting point and ending point meet at such ley-lines. The 'Serpent' design with a 'S' curvature is made by a road leading to the spot where the 'Face of Mars' is situated at.

PLEIADIAN PATTERN CYDONIA, MARS ORION'S BELT

This corresponds the structure that is also in-between the Pleiades Pyramid City and the Pentagon Pyramid on Mars. This triangulation comprises the hexagram as a 2nd triangle of the same proportion is inverted upon itself. The triangle of the Martian motif corresponds to the alignment angle of the 3 pyramids of Giza that have a 45-degree angle. The apex of the hexagram corresponds so the center point of the Great Pyramid.

What is astonishing is that no other celestial motif from any other planet but Mars and no other area but the Cydonia complex on Mars has been replicated from ancient times on Earth. What has already been discovered by many researchers is that the 3 main pyramids of Giza pertain to the celestial Belt stars of Orion.

Google earth

In fact, the whole Nile River course-way mirrors the Galactic Meridian or the Milky Way with various Egyptian pyramid complexes mirroring the correlating constellations. It is amazing that the geometry of the Cydonia, Mars layout over the Giza Plateau has not yet been discovered. This is aside from those that intentionally put it there since the Pyramids were constructed and those that keep such a Martian motif encrypted with modern ley-lies that match it still.
