

Vision loss can impact the overall health and well-being of older adults in many ways, as it increases the risk of falls and makes it difficult to perform basic day-to-day activities. It hinders patients' ability to perform self-care, manage medication and even recognize loved ones. At Encompass Health, we offer specialized training to those with visual impairments, and introduce small lifestyle changes, that enable our patients to remain independent and partake in activities they enjoy.

**Leading causes of low vision:**

- Macular degeneration
- Diabetic retinopathy
- Glaucoma
- Cataracts
- Stroke-related sight loss

**Encompass Health will:**

- Evaluate the home environment for safety issues
- Teach new ways to accomplish difficult tasks
- Explain effects of the patient's specific eye disorder
- Introduce adaptive devices and tools

**Medicare patients must be homebound**

Leaving home takes a considerable and taxing effort. Absences from the home must be infrequent, for periods of short duration, or attributable to the need for medical treatment.

**Point of care technology**

Encompass clinicians are equipped with the most current information at the Point of Care, including patient vital signs, medical history, clinical pathways & physician orders to execute the plan of care.
