

M2CP Electric Valve Actuators

The Strength Of Ductile Iron With The Agility Of Digital Control

BETTIS

EMERSON

A Heritage of Performance Reliability Built on Proven Technologies

M2CP actuators were introduced in 1979 as the EIM Series 2000 electric valve actuator. Since that time, the model has added increasingly sophisticated control capabilities—but retained all the mechanical strengths that have established its three decade record of reliability. As a result, many parts can interchange across the entire M2CP/Series 2000 range, and upgrades are remarkably easy to retrofit.

The robust mechanical design of the M2CP is evident in its ductile iron gear case, bronze worm gear, and heat-treated

alloy steel worm. Add the flexibility of modular control packages, plus an international sales & support network, and the result is an actuator to count on for the long term.

While the name has changed, uncompromising design and manufacturing standards have remained constant. These robust units are part of the same family of actuators that have proven themselves again and again across a wide range of applications in the world's most demanding environments.

Current M2CP units evolved from proven technology—as shown by this EIM actuator, still operating after more than 50 years at a water distribution and storage system in New York City.

Actuators in gas compressor stations must operate under constant vibration.

Benefit from quality, versatility and service for years to come

M2CP/KBG bevel gear actuator in high-temperature steam service (1,070°F; 577°C) at an electric power generation plant.

Bettis AquaNaught variant of the M2CP actuators can withstand extended submersion.

Bettis Coker variant of the M2CP actuators can withstand extended vibration.

Selection Guide

M2CP electric actuators fit a broad range of quarter-turn and multi-turn applications

M2CP actuators offer a wide range of frame sizes, horsepower ratings and output speeds to meet a variety of application requirements for voltage, torque, operating time, and valve-shaft diameter. Mounting dimensions are consistent with MSS SP-101, MSS SP-102, and ISO 5210.

Quarter-turn actuators are designed for ball, plug, and butterfly valves as well as damper and louver drives. Models P, Q and R are direct-mounted for up to 2,500 foot pounds. Larger units use close-coupled worm gear actuators for up to 400,000 foot pounds.

Multi-turn actuators are designed for gate, globe, check, stop-check, and angle check valves, as well as sluice gates, weir gates, and multi-turn damper drives.

Available Voltages

3 Phase, 60 Hz	208, 230, 380, 440, 460, 575, 690
3 Phase, 50 Hz	220, 380, 415, 460
1 Phase, 60 Hz	115, 208, 230
1 Phase, 50 Hz	115, 208, 230
DC	12, 24, 48, 125, 250

M2CP Actuators are Designed for Reliability, Versatility and Ease of Use

- ① **Motor** options include most voltages of single-phase or three-phase alternating current and direct current. Built-in thermal protection is standard.
- ② **Motor gear** selections allow speed and torque output combinations.
- ③ **Handwheel gear set** allows users to limit the rim pull required to operate valve manually regardless of torque required.
- ④ **Transformer** is fully encapsulated and epoxy impregnated.
- ⑤ **Reversing contactor** is DIN rail mounted for quick maintenance.
- ⑥ **Power module (PWR)** provides transformer primary fuses and terminal strip for motor voltage.
- ⑦ **Terminal board module (TBM)** provides connection points for user wiring and transformer secondary fuses.
- ⑧ **Overload relay option** senses over current for motor thermal protection.
- ⑨ **Intermediate switch module (ISM)** options include Controlinc™ digital network, Futronic™ modulating controls, interposing relays, and intermediate limit switches.
- ⑩ **Limit switch module (LSM)** allows combinations of position limit switches, torque switches, push buttons, pilot lights, and selector switch.
- ⑪ **Light emitting diodes (LEDs)** add reliability and operating life.
- ⑫ **Torque switch** protects valve and actuator in both open and closed directions.

Digital Control Packages Provide the Latest Networking Capabilities

- ⑬ **Power shift clutch** requires minimal force to operate even when valve is tightly seated.
- ⑭ **Clutch handle** can be padlocked in either hand or motor position to prevent unauthorized use.
- ⑮ **Handwheel shaft** is supported by bearings and splined at both ends to eliminate keys.
- ⑯ **Drive sleeve** consists of a bronze worm gear and drive sleeve supported by tapered roller bearings to maximize radial and thrust-load support.
- ⑰ **Main housing** is ductile iron to provide maximum strength and durability.
- ⑱ **Fold-up handle** for manual valve operation in emergency or power outage has compact profile to stay out of the way until needed.
- ⑲ **Geared limit drive assembly** always remains in sync with valve position. No batteries required.
- ⑳ **Worm shaft** is heat-treated alloy steel.
- ㉑ **Torque springs** accurately sense torque independent of electronics and regardless of voltage fluctuations.
- ㉒ **Roller bearings** support the worm shaft.
- ㉓ **Torque limit assembly** receives rotary mechanical feedback from torque springs directly through main worm shaft. Torque switch is active in both electric and handwheel operation.
- ㉔ **Electrical compartment enclosure** has hinged cover, O-ring seals, stainless steel hardware, and multiple conduit entries.

Design Features

Motors and Spur Gears

M2CP actuator motors employ a minimum number of mounting configurations to maximize interchangeability. The motor and spur gear set form a modular unit that is mounted with only eight accessible fasteners.

Motor gear assembly

- Wide range of motor-reduction spur gear selections offer multiple speed and torque output combinations.
- Field modification of torque and RPM outputs is easily accomplished.

Motor gears

- Alloy steel motor gears are spline mounted for strength and ease of installation.
- Gear sets are interchangeable.
- Assembled in single- or double-reduction ratios as required for actuating time.

Thermal overload protection

- Thermal contacts sense winding temperature and break the control circuit before damage occurs.
- Standard motors, supplied with thermal overload protection may be disabled for emergency shutdown installations.

CAUTION: disabling overload protection can undermine explosion-proof capabilities and may violate hazardous code certifications.

Handwheel Override / Clutch Mechanism

M2CP actuators include an auxiliary clutch handle for emergency use. The clutch operates on the low torque side of the worm and worm gear drive train, and requires minimal force to operate. The valve, gate or damper is never disconnected from the self-locking worm gear.

Clutch lever assembly

- Lever shifts position of the splined clutch spool so power drive can be engaged by either motor or hand wheel.
- Assembly requires no adjustment and mounts with just three screws.
- Lever can be padlocked in “manual” mode for safe maintenance, or in “motor” mode to prevent tampering. Motor preference is standard.
- Common to all M2CP model sizes.

Clutch spool

- Steel clutch spool makes simultaneous engagement of motor and handwheel impossible.
- Power from motor cannot be transmitted to manual lever.
- Drive connection to worm shaft is by sliding spline.
- Fused motor does not prevent handwheel operation.

Padlockable clutch handle

- For added safety, clutch handle can be padlocked in either manual or motor position to prevent tampering or unauthorized use.

(Above: clutch handle detail)

Clutch assembly

1. Clutch handle (padlockable)
2. Motor spur gears (alloy steel)
3. Clutch spool
4. Handwheel shaft
5. Handwheel gears
6. Clutch shaft assembly

Main Drive Gears

The main drive train of the M2CP actuator incorporates a heat-treated alloy steel worm, as well as a cast-bronze worm gear drive sleeve, supported by tapered roller bearings to maximize thrust load support.

Worm and clutch assembly

- Torque is received through clutch shaft from motor and first stage motor spur gear set.
- Torque springs are easily accessible for field changeover to raise or lower torque range.
- Alloy steel, heat-treated worm is bearing supported.

Clutch shaft splined connection

- In operation, the clutch shaft is “fixed” by splined connection for accurate geared limit drive calibration.
- Worm moves axially on its splined connection in either direction against the torque spring assembly for torque sensing.
- Input from motor and motor gears is transmitted through the worm to the bronze worm gear drive sleeve.

Torque-limit and Geared-limit Drive Assemblies

Limit switch gearbox

- A limit switch gearbox is mechanically connected to actuator worm through the geared limit-drive assembly.
- The limit switch gearbox remains in sync with valve position at all times, whether driven by motor or handwheel, even under lost power conditions.
- Both the torque and limit switches maintain settings in all conditions without relying on battery backup.

Splined drive bushing

- Quarter-turn actuators offer a bottom-entry splined steel bushing design to simplify mounting on valves.
- Splines provide high-strength, multiple-position connection to the keyed valve shaft, improving accuracy of seat calibration and allowing for multiple mounting positions not possible with bored and keywayed drive sleeves.
- Cast bronze worm gear drive sleeves are mounted in high-quality tapered roller bearings to maximize thrust load support.

Torque switch

- Simple torque adjustments can be made to increase or decrease torque caused by changes in operating conditions.
- Torque switch adjustment determines amount of movement permitted before the motor reversing starter is de-energized.
- Mechanical torque sensing at final actuator output is not dependent on electronics.
- Open and close torque settings are independently adjustable.
- Torque switch can be pinned at any setting from 1 to 9 to limit maximum actuator torque.
- Torque switch dial is active during power and handwheel operation—no batteries required.

Drive assembly cutaway view

M2CP Modular Control Package

Unsurpassed quality, reliability, flexibility and ease of use

The M2CP advanced modular control package is designed to provide years of flexible, reliable, and cost-effective valve automation. Servicing and upgrading are quick and easy. The entire package or any component can be removed and replaced in minutes—ensuring that the M2CP actuator is always ready to accommodate future control technologies.

M2CP offers ease of service and maintenance

The entire electronic control package of the user-friendly M2CP can be removed, assembled, disassembled, and replaced using only a standard screwdriver. As a result, field service can be performed quickly and easily with fewer mistakes. The module can also be used for non-integral applications with remote-located motor starters.

Reversing contactor

- Reversing contactor/power module is DIN rail mounted for snap-in/snap-out convenience. Captive stainless screws secure module from vibration.
- Reversing contactor is mechanically and electrically interlocked.
- Power module offers easy access to transformer primary fuses and separate high-voltage terminal strip for incoming power leads.
- Optional phase sentry provides single-phase protection and prevents incorrect rotation.

Terminal board module

- Each transformer secondary is individually fused and grounded on the terminal board module for easy accessibility.
- Transient power surge suppressors are located throughout the M2CP module to protect electrical components.
- Terminal board module provides convenient access to 48 terminal points, analog and digital signal inputs/outputs and control voltage.

Integral control panel

- High-intensity LED panel lights offer lifetime service, much longer than conventional incandescent bulbs.
- Triple O-ring sealed, stainless steel push buttons ensure long-term integrity against leaks and corrosion.
- 3-position selector switch is available with padlockable or key switch.

Modular control package with optional control boards

Options and Accessories

Mechanical Dial Position Indicator (MDPI)

- Indicator is driven by a high-precision set of reduction gears. On multi-turn applications, visual indication of valve position from 0-100% is provided.
- Dial is mechanically in sync with valve position at all times regardless of motor/handwheel operation or availability of power.
- An optional combination mechanical/electronic position indicator is also available (shown above).
- Tempered, explosion proof glass display window never becomes clouded or discolored.

Circuit breaker module

- The circuit breaker/disconnect switch interrupts the circuit between actuator and current source, removing all power to ensure safety during servicing or field maintenance.
- Protects motor control apparatus and motor against over-current due to short circuits or grounds.
- Several disconnect devices are available mounted in electrical compartment or in separate control modules that can be close-coupled connected to an actuator or bracket-mounted to a wall, panel, rack, or pipe.

Futronic™ analog modulating control module

- Futronic™ modulating controls are capable of handling both position and process control elements via industry standard 4-20 mA signal.
- Futronic II position control uses 1- or 3-phase power.
- Futronic III process control uses 1-phase power, DC motor, solid state starter.
- Futronic IV process control uses solid-state reversing starter, 3-phase power, and AC motor.
- Futronic VIII supports variable-frequency control.

External door interlocks require an integral circuit breaker/disconnect to be engaged before opening electrical compartment.

Optional remote control station (PBM)

Controlinc™ Network Control

M2CP easily adapts to the latest digital network technology

The M2CP delivers the dynamic combination of robust mechanical actuators plus the latest digital control technology.

An optional Controlinc™ communication module with onboard microprocessors can equip the M2CP to achieve full digital network functionality. Bettis does not employ proprietary protocols. Standard protocols supported include:

- Modbus RTU
- FOUNDATION™ fieldbus
- Profibus DP with Redcom redundancy
- DeviceNet
- Ethernet
- HART™

Controlinc™ includes traditional open/close or precise set point commands as well as complex digital control network monitoring and response systems. Digital communication reduces wiring costs using small diameter communication cable for command and monitoring of actuator performance and valve parameters.

Standard Controlinc™ features and benefits

- Microprocessor-based controller is integral to each actuator.
- Can be used with all types of valves and processes.
- Removal or failure of the module does not affect local push button control.
- Installation and setup is quick and easy.
- Easy to use and maintain.
- No proprietary protocols required. All communication flows unrestricted via industry-standard protocols, so the Host can communicate directly to each actuator or to Bettis' optional network master stations using Modbus RTU.
- Backwards compatible for more than 20 years of Bettis actuators.
- Distributed control capability reduces central computing equipment costs.
- "Learns" characteristics of valves and adapts accordingly.
- Auto-calibration eliminates need for user adjustments.
- Can reduce wiring costs by up to 60 percent.
- Can acquire data and control other devices at no additional cost.
- Compatible with existing Host equipment (PLC, DCS, SCADA).
- Real time data acquisition and diagnostics with alarms to reduce downtime, safety hazards, process interruptions, and lost production.
- Single, standardized model reduces spare parts inventory and availability.

Serial E>Net Redundant Ring Topology

Multi-drop Bus Topology

Controlinc™ Modbus RTU supports up to 250 valves and other devices over a 200-mile range

Network master features and benefits

- Offers network management and data concentration, offloading tasks from Host to enhance overall system performance and minimize software/hardware configuration costs.
- Monitors and records orderly cycle of data transfers to and from connected actuators.
- Achieves data concentration for Host using a common database for all actuators. Host needs to only communicate with one “slave” device (network master) for all data transfers to and from field.
- Provides isolation and transient protection for Host.
- Input cabling from Host can be RS-232, -485, -422, or Ethernet.
- Supports baud rates up to 115,200 baud to host.
- Optional LCD display/keypad or touch screen allows users to control network and receive status and alarms of each actuator on the network.
- M250 supports up to 250 actuators and other devices.
- M124 supports up to 124 actuators and other devices.
- Mounting options/M250: 19-inch rack or desktop mountable.
- Mounting options/M124: 19-inch rack, desktop, or NEMA 4X enclosure.

Here's how Controlinc™ pays off long-term:

Cost savings

- Reduced cable costs.
- Host system off-loads.
- Reduced downtime and service requirements.

Increased efficiency and reliability

- Ability to maintain local push button control.
- Reduced demands on Host system.
- Mechanical geared limit and torque switches maintain valve/actuator position sensing in a power failure without power backup.

Expanded capabilities and flexibility

- Modbus RTU communications operates at 19.2 Kbaud or 9.6 Kbaud with 250 devices over 200 miles.
- Plug-in adaptors support a range of network topologies including single redundant bus and ring networks.

Easy to install, Controlinc™ control modules offer a range of possibilities. (Shown: M250 Master Station)

M250 Network Master with optional LCD display & touch screen

M124 Network Master with optional LCD display & keypad
