

DO YOUR PART AND HELP CONSERVE WATER

Because we had such a dry winter, we are asking for you to be conservative in your water usage.

How you can help:

- You only need to water your lawn up to 3 times a week and less if we have rain.
- Avoid watering in the middle of the day. By watering early in the morning or at night the water will absorb into the ground, using less water.
- Adjusting your sprinklers so you are watering the grass and not the sidewalks.
- If everyone does their part we should have enough water for the water season; if not, then no one will.
