

Clesta LED
LED Dental Light

■ Clesta LED

Dental Light

A blend of LED capabilities and ease of use delivers a bright and comfortable work environment.

Easy on the Eyes

A stepless light adjustment provides operators with the ability to fine-tune illumination to fit individual operatory lighting conditions. Adjustment on light intensity creates a comfortable work setting by minimizing eye fatigue.

Positioning Flexibility

A three-axis light head rotation provides operators with the flexibility to direct illumination precisely where it is needed within the patient's oral cavity.

Color Rendering

The 5 LED bulb array provides cool white light that is excellent for tooth shade matching and differentiation of soft tissues.

Asepsis Benefit

Touchless sensor facilitates hands-free activation for minimizing the risk of cross-contamination of the light head surfaces.

Direct Illumination

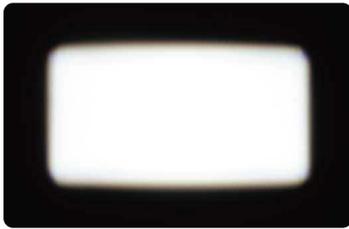

Direct LED illumination maximizes efficiency and does not require a cooling fan.

Practicality

Long LED life and low power consumption adds to operatory efficiency.

Useful Through Obstruction

Shadowless illumination technology allows for uninterrupted lighting to the patient oral cavity, even with a 50% obstruction between the light head and the patient.

Mounting Options

Configurations include ceiling mount, track mount, post mount, curved post unit mount, swing mount.

Type 302 Ceiling Mount

Type 301 Post Mount

Type 305 Track Mount

Type 320 Unit Mount
