

How to Care for Your Human Hair Wig

Washing / Conditioning

Cleaning - Fill sink with 5 to 6in of cold water and a nickel size amount of Shampoo. Immerse and let soak for 20 minutes.

Rinse - Drain and rinse wig with cold running water.

Conditioning – Fill sink again with cold water and a nickel size amount of Conditioner and soak for 5 minutes.

Rinse- Rinse wig again with cold running water. Towel blot wig. Shake wig and place on your collapsible wig stand to dry.

*Comb wet hair from the bottom to the top using gentle downward strokes one section at a time. Never begin combing at the top or middle and always comb down.

Drying

*Allow wig to dry naturally on wig stand.

* To restyle your human hair wig, you may use a blow dryer or curling iron on low heat setting or use warm heat or steam rollers.

Styling

1. Always use a wide tooth or pick comb for curly styles and a wire brush for straight styles. Avoid standard brushes.

2. When brushing, start at the end and gently work your way to the roots.

3. To completely restyle your human hair wig, we suggest bringing it back to Studio I to be refurbished.
