*Locally Owned  
and  
Operated*

## MISSION STATEMENT

*"To provide the highest level chain of security while helping our clients protect all confidential information, promote environmental stewardship, and instill peace of mind for all involved."*

**(701) 690-5480**

**INTERIOR LOOK**

*Our on-site hard drive destruction is much more secure because we destroy all of your hard drives at your location during business hours. You can visually verify that your media is actually being destroyed right then and there.*

**NO WAITING AND NO UNCERTAINTY.**

**ADVANTAGES OF ON-SITE SHREDDING**

- Your documents are handled on your property so you know who has had access to your materials before they are destroyed.
- Documents are never left unattended so there is no risk of unnecessarily exposing your information to others.
- You have the ability to watch and witness your records being destroyed at your location. A certificate of destruction is issued and you have visual confirmation that your files have been properly shredded.
- Your shredded documents are mixed with other paper in the shred truck meaning that there is virtually no way to piece your information back together.
- After your documents are shredded, they are transported back to a facility to be baled. Since your documents have already been destroyed, there is no risk involved if there is a truck break down or accident.

**DISADVANTAGES OF OFF-SITE SHREDDING**

- Unforeseen problems can occur during the transport of your documents to a shredding facility. What happens to your information if an accident occurs or the vehicle breaks down during transport?
- Oftentimes, your documents and information will sit in a warehouse until they are ready to be shred. You can never be sure who is actually exposed to your information and how long they are left out in the open or unattended.
- Multiple people will be handling your documents when they are shredded off-site including the driver of the truck and the sorters. It's of utmost importance for the service provider to conduct extensive background checks on their employees. Since you cannot watch your documents being destroyed, you have no visual proof that your documents have been properly shredded.

**WARNING!**

**OVER 10.1 MILLION PEOPLE ARE VICTIMS OF IDENTITY THEFT!**

**OWNER'S COMMENTS:**

*"Where our certification of destruction means something."*

*"No long term traps here."*

*"Our employees are HIPAA certified, drug screened, and background checked."*

*We provide a superior hands-free on-site document, hard drive and small electronic media destruction.*
