CERTIFIED Pre-Owned

10 Point Quality Inspection

Every unit is examined & refurbished accordingly.

We go over every inch of these machines!

ROLLERS

The rollers are the heart of any laminator. Their condition is vital to the production of perfect output. Rollers must be free from defects that compromise the quality of the finished product.

SAFETY

All equipment must operate safely per the original manufacturer's design.

ROLLER PRESSURE/LIFT

Precise and even pressure and gap operation & adjustments are critical to flawless operation.

DRIVE

The motor and chain system must be clean, well lubricated and free of excessive noise.

ELECTRICAL

All electrical components must be operating properly per the original manufacturer's specifications.

HEAT

Optional heaters must control the roller temperature evenly within the system's designed specifications.

COOLING

Optional fans and ducts must be clean and free of debris to provide the desired cooling air.

CONTROLS

Operating controls must provide the operator with complete control and clear feedback of machine's proper operation.

FIT AND FINISH

All surfaces and covers must be intact and as clean as possible to prevent product contamination and provide pride of ownership.

WHEELS AND CASTERS

All wheels and casters must be operational to allow for easy moving of equipment within the user's facility.
