Innovation Drives Groundbreaking New Technology in EMI Shielding Market

Wooster, OH/ Newark, NY [March 2021] – Following the announcement of our partnership in December of 2020, leading textile companies, Seaman Corporation and V Technical Textiles, Inc. (VTT), are proud to launch an innovative new product with groundbreaking technology for multiple applications. The introduction of Shelter-Rite® RF™ products offers technologically advanced safety and security in situations that require a more rugged and robust RF Shielded Material. The durability and security for the end user is unmatched in the industry.

The union of high-performance products and technology from each of the companies provides a solution in situations where weather and moisture are factors; such as, portable outdoor RF Shelters for Military, RF curtains, Aerospace Cleanrooms, Automotive Test Chambers and Fabric Based Access Doors. Shelter-Rite RF can also be utilized as a covering for the exterior surface of an existing architectural structure as a shielding solution. The time-tested protection of the Seaman Corporation fabric provides the metalized textile much more resistance to routine wear, puncture, tear, UV and weather.

This high-performance PVC coated textile allows for the use of these thin RF shielding materials in environments where they previously were unable to be used before. “Seaman Corporation has manufactured durable performance textiles that offer peace of mind to end-users for decades,” says Evan Stoll, Industrial Fabrics Application Engineer for Seaman Corporation. “The addition of EMI Shielding to our product lineup expands our ability to offer safety and security to our customers.” Contact Evan directly at 330-202-5946 for more information on this product line.

About Seaman Corporation

Since 1949, Seaman Corporation has been a world leader of innovative, high performance coated fabrics including FiberTite® Roof Systems, Shelter-Rite® Architectural Fabrics, XR® Geomembranes, and Shelter-Rite® Truck Tarps, as well as collapsible fuel tanks and tent materials for military and government applications. Seaman Corporation is a Veteran owned USA manufacturing-based company.

About VTT

Founded in 2006, V Technical Textiles, Inc. (VTT), is an EDWOSB certified business, and USA manufacturing company of products made from conductive textiles. VTT is the leading manufacturer of RF/EMI/EMC portable shielded enclosures, RF shielded curtains, covers, pouches, and garments. VTT is also a supplier of the world’s largest selection of electrically and thermally conductive textiles, yarns, and fasteners.
