

skin-tightening

Dr. David Rahimi

ThermiTight and Thermi-smooth tightens sagging skin under the chin and on breasts, arms, stomach and thighs in one treatment to produce natural face and body results.

Los Angeles-based, Dr. David Rahimi is triple Board-Certified in Dermatology, General Cosmetic Surgery, Cosmetic Facial Surgery. He and his team at Forever Young, a company he founded, specialize in minimally invasive, anti-aging procedures offering natural-looking results that heal in record time. He has performed over 100,000 laser and surgeries since 1999. Dr. Rahimi recently received two distinctive awards: Top Doctor 2018 and Super Doctor 2018, and will be recognized in the LA Times and LA magazine in January and April 2018. Dr. Rahimi is touted for his ground-breaking face and body, anti-aging, rejuvenation treatments, and for providing personalized service and attention to every patient who walks in his office door.

Incorporating a philosophy of holistic care in his medical practice, Dr. Rahimi offers patients natural-looking results effective in turning back the clock. Patients who fear standard facelift surgery are thrilled with his, Tulip Facelift, a patented procedure safer and more effective than traditional facelifts. His age reversing 'Quadrafecta' is a NO-cutting, NO surgery, ONE treatment, ONE week downtime facelift that sets a new standard in achieving maximum anti-aging results. A new and advanced procedure that targets sagging skin on the face and body is, ThermiTight and Thermi-smooth — minimally invasive procedures that tighten loose skin on the body and unsightly sagging skin on the neck — both age-telling signs that plague women and men alike.

ST: What is ThermiTight and what can it do for sagging skin?

Dr. Rahimi: ThermiTight, one of the newest technological treatments available, uses exact precision temperature control with the most procedurally advanced “real-time” monitoring to treat specific areas of sagging, soft tissue and fatty skin on the face and body, especially the neck, arms and stomach areas. ThermiTight offers tightening of loose skin which produces remarkable anti-aging results.

ST: How does it work?

Dr. Rahimi: A small anesthetic solution is injected into the area and, the ThermiTight process uses a tiny probe to carefully heat up pre-determined soft tissue areas that are sagging. The success of this treatment lies in the tiny probe because it offers continual feedback to the doctor on the temperature of the probe, and length of time needed to treat a specific area. There is no room for error not treating an area long enough, or too long because the probe offers “real-time” treatment required. After application, a gentle wrap is applied; patients resume normal activities the next day. ThermiTight is ONE application, minimally invasive with excellent results and manageable downtime. ThermiTight has also been cleared by the FDA for use in dermatology and general surgery procedures.

ST: What is the cost for ThermiTight?

Dr. Rahimi: It varies, but generally ranges \$1,500 to \$5,000 which is determined by the area being treated.

Thermi vs. Ultherapy, vs. Pelleve, vs. Thermage CPT WHICH ONE IS BETTER FOR YOU?
