EDUCATION

Ph.D., Marine Sciences, University of South Alabama, 2007
M.S., Geology, University of Alabama, 1990
B.S., Geology, University of South Alabama, 1983

PROFESSIONAL MEMBERSHIPS

American Geophysical Union (Member)
Geological Society of America (Member)
International Association of Hydrogeologists (Member)
Sigma Gamma Epsilon national honor society for the Earth sciences (Life Member)
Sigma Xi scientific research honor society (Member and Past Chapter President)

AWARDS & HONORS

Named one of the 50 Outstanding Faculty Members, 1963-2013, University of South Alabama Faculty Senate, 2013
Awarded Semoon and Youngshin Chang Endowed Award for Humanitarian Service, University of South Alabama, 2013
Named first company Principal Emeritus upon retirement, Eco-Systems, Inc., 2013
Presented three Mortar Board "Top Prof" Awards, University of South Alabama Chapter, 2011 and 2012
Elected President, Sigma Xi Scientific Research Honor Society, University of South Alabama Chapter, 2011-13
Presented Outstanding Service Award, University of South Alabama College of Arts & Sciences, 2011
Named Faculty Member of the Year, University of South Alabama Student Government Association, 2010
Elected Faculty Senate President, University of South Alabama, 2010-11
Named Faculty Member of the Year, University of South Alabama Student Government Association, 2009
Inducted into Sigma Xi Scientific Research Honor Society, 2009
Elected President, Southwest Alabama Geological Society, 2007-09

Presented Teaching Excellence Award, University of South Alabama College of Arts & Sciences, 2007

Presented Most Outstanding Young Professional Award, Woodward-Clyde Consultants, 1992

Inducted into Sigma Gamma Epsilon National Honor Society for the Earth Sciences, 1983

PRIVATE-SECTOR EXPERIENCE

James J. Connors & Associates, LLC, Fairhope and Tuscaloosa, AL, 2013-present

President/Senior Principal Scientist (2/13-Present)

Eco-Systems, Inc., Jackson, MS, and Fairhope, AL, 1993-2013

Principal Emeritus (retired 2/13)

Co-founder/Senior Principal (2/93-2/13)

Exsorbet Industries, Inc., Little Rock, AR, and Jackson, MS, 1995-1999

President/Chief Executive Officer/Chairman, Board of Directors (2/97-2/99)

Chief Operations Officer (1/97-2/97)

President, Interim, Emergency Response/Industrial Services Subsidiary, (9/96-1/97)

Executive Vice President for Sales and Business Development (4/96-1/98)

Senior Principal Hydrogeologist (12/95-4/96)

Woodward-Clyde Consultants, Jackson, MS, 1989-1993

Vice President (8/91-5/93)

Operating Unit Manager (8/90-8/91)

Office Manager/Senior Project Scientist (5/89-8/90)

Geraghty & Miller, Inc., Tampa, FL, and Baton Rouge, LA, 1986-1989

Senior Scientist/Division Manager for Hydrocarbon Services (5/88-5/89)

Staff Scientist (5/87-5/88)

Scientist (6/86-5/87)

P.E. LaMoreaux & Associates, Inc., Tuscaloosa, AL, and Lakeland, FL, 1985-1986

Hydrogeologist/Computer Modeler (2/85-6/86)

ACADEMIC EXPERIENCE

University of South Alabama, Mobile, AL, 2003-2016

Faculty Positions

Associate Professor, Department of Interdisciplinary Studies (1/15-1/16)

Assistant Professor, Department of Earth Sciences (1/08-3/12)

Instructor, Department of Earth Sciences (1/05-1/08)

Part-time Instructor, Department of Earth Sciences (1/03-1/05)

Administrative Positions

Dean, Interim, School of Continuing Education & Special Programs (1/15-1/16)

Special Assistant to the Vice President for Research & Economic Development (12/13-1/15)

Associate Dean, School of Continuing Education & Special Programs (3/12-12/13)

Director of International Education, Interim (2/13-11/13)

Chair, Interim, Department of Developmental Studies (8/12-12/13)

Vice President for Research, Interim (3/12-8/12)

SELECTED PROJECT EXPERIENCE

Expert witness for plaintiffs in a circuit court case involving flooding due to residential stormwater runoff. Reviewed file, including opposing expert's report, historical aerial photos, and detailed topographical data and maps, conducted site inspection and interviews, and produced expert report.

Expert witness for plaintiff in a circuit court case involving large-scale sedimentation in a low-energy coastal estuary. Conducted multiple site inspections and GPS mapping of sediment transport routes, collected and analyzed (grain-size) sediment samples, reviewed file and site-specific data, which included historical aerial and client photos, historical plans and specifications, and participated in multiple mediation meetings.

Consultant for defense in a circuit court case involving personal injury related to a gasoline spill. Gave expert advice on Spill Prevention, Control, and Countermeasure (SPCC) plan procedures and responsibilities, reviewed case-related documents, maps, and photos.

Expert witness for defense in a circuit court case involving an alleged sewage and chemical release into a northern Michigan river. Reviewed file documents (photos, depositions, produced documents, etc.), researched local maps, rainfall and wind data, conducted a site inspection, and produced expert report.

Expert consulting for defense in a circuit court case involving potential damage to a pond and dam due to a vehicle accident. Reviewed file documents and plaintiff's remediation cost estimates, performed a site inspection, and provided technical assistance to attorneys.

Expert witness for defense in a circuit court case involving a coastal wetlands expansion due to stormwater and sediment transport over time. Reviewed multiple deposition transcripts, soils data, aerial and site-specific photos, and opposing expert reports. Conducted multiple site inspections and documented/mapped local stormwater flow, supported attorneys with their deposition of opposing experts, and prepared an expert report.

Expert witness for plaintiffs in arbitration regarding the fate, transport, and timing of subsurface free-phased and dissolved chemicals at a riverside refinery. Reviewed file documents, produced expert and rebuttal reports, gave testimony during the arbitration hearing, produced computer model of site groundwater flow, met with regulatory agency, performed a site inspection, and provided technical assistance to attorneys with filings.

Pre-litigation consulting/support for attorney in a threatened case involving flooding of a residential area due to unpermitted construction activities and associated hydrological alterations on adjoining (upgradient) properties. Reviewed file documents/plans/specifications, conducted a site inspection, and provided technical assistance to attorneys with filings.

Expert witness for plaintiffs in a circuit court case involving residential flooding associated with a groundwater spring. Data and reports were reviewed, technical support was provided to

attorneys during the deposition of opposing expert, a deposition was given, and court testimony was provided.

Expert witness for plaintiffs in case involving large-scale gasoline contamination from a fuel pipeline leak that occurred approximately 30 years earlier. Reviewed data and case-related documents, produced an expert report, gave a deposition, and testified in circuit court.

Expert for plaintiffs in a federal court case involving long-term environmental impacts from a large (4+ million gallon) petroleum residuum spill in a coastal wetland area. Work involved a site inspection, sample collection and analyses, document reviews, and production of an expert report.

Expert witness for defense in a federal court case involving alleged hydrocarbon and brine contamination associated with a pipeline break in an oil field. Work involved a file review, production of an expert report, a deposition, peer review of opposing the expert's work, and assisting attorneys with opposing expert deposition preparation and the production of a Daubert motion.

Expert for plaintiffs in a case involving the environmental impact associated with a crude oil/brine pipeline release on a private ranching property. Reviewed case data and documents, sampled soil and groundwater, produced an expert report, and gave a deposition.

Litigation-related consulting for defendant in a case involving potential airborne contamination from a steel manufacturing facility. Reviewed data and all provided documents, and critiqued opposing expert's reports and opinions.

Expert consulting and litigation support for defense in several related cases involving alleged brine contamination of groundwater aquifers. Files were reviewed, a literature review was performed, and several expert reports produced.

Expert for defense in a federal court case involving potential contamination of surrounding properties from a closed construction-debris landfill. Case documents were reviewed, an expert report was produced, research was performed to rebut opposing expert's opinions, a deposition given, and consulting was provided for the cross-examination of the plaintiff's expert.

Pre-litigation technical support and consulting for a plaintiff-attorney group styling a potential class-action lawsuit involving fuel-additive contamination of groundwater and surface water in several southeastern states. Literature was researched and reviewed, field reconnaissance was performed, and samples were collected/analyzed.

Litigation support and consulting work for defense attorneys in a case involving PCB contamination timing at an aluminum manufacturing facility. Reviewed case file and assisted in attorneys with the depositions of opposing experts.

Expert testimony for defendant in settlement hearing involving remediated PCB-containing sediments in a contaminated wetland area. Reviewed remedial investigation data and details of the proposed remedy, gave courtroom testimony.

Groundwater computer modeling for litigation involving potential regional drawdown from a proposed large water-supply wellfield in a karst aquifer system. Reviewed regional hydrogeological data, prepared input files, ran numerous MODFLOW simulations, calibrated and verified models, and prepared courtroom graphics to demonstrate the results.

Expert for an oil company in an oil and gas board hearing concerning potential contamination of shallow aquifers by injection wells. Produced an expert report and provided onsite technical support during hearing.

Pre-litigation consultant on a case involving potential contamination sourced by a large, active pre- and post-Subtitle D landfill complex.

Researched and provided public comment before a regional fishery commission management board on the potential ecological impacts of a commercial fishing ban in an eastern seaboard bay.

Hydrological evaluation of recharge rates of a naturally-occurring karst spring used for bottled water production. Site was in the Appalachian fold-and-thrust belt in central Alabama. Work involved file and geological review, pumping (time/drawdown) testing, specific capacity testing, recharge testing. A report and list of recommendations were produced.

Statewide screening of historical groundwater information for an international corporation to produce detailed maps and tables showing the potential locations of groundwater with specific temperature, salinity, production, and depth characteristics for a special industrial use in Louisiana. Once screening was completed, shortlisted properties were evaluated in greater hydrological detail and ranked for potential acquisition.

Planned and managed a regional environmental audit program (for detection of regulatory compliance issues) for a large oilfield and industrial services company in Mississippi and Louisiana. Included working with client personnel to set goals and develop a standardized evaluation rubric, site visits and file reviews, targeted environmental sampling at several large facilities in U.S. Gulf Coast region.

Compliance and property transfer environmental investigations for a major oil company involved with the divestiture of hundreds of gasoline retail outlets in the Florida Panhandle and southern Alabama. Work involved the development and implementation of phased site audits, file reviews, and targeted subsurface investigations.

Site audits and property transfer environmental investigations for numerous properties targeted for acquisition by a large gaming/casino company in Mississippi. Work involved regulatory and site investigations, and additional intrusive investigations and remediation when contaminated sites were detected.

Developed mutually-agreed to baseline environmental/health & safety (EHS) standards in a Southeast Asian country for a major U.S. oil company. Work involved researching and negotiating standards, writing the regulatory document, arranging for official acceptance/signing, implemented/training personnel onsite, and auditing/accessing implementation.

Multi-phased contamination assessment/remedial action at an oil and gas field in southern Mississippi. Located abandoned waste drums using ground-penetrating radar data and borings; sampling drums; site characterization; and quantifying releases. Contaminants were TPH, chlorides, and oil field wastes. Impacted media: soils and groundwater.

Contracted by a major oil company to implement a pre-transfer environmental/regulatory audit and investigation of a large onshore oil and gas field in southern Mississippi. Work involved file reviews, visits to wells and process areas, interviews with company employees, and

sampling of suspected contaminants and wastes. Remediation was implemented, where appropriate.

Performed numerous site environmental/health & safety (EHS) audits at facilities operated by a U.S. Government scientific agency along the Gulf Coast. Work involved general research of the facilities, site visits, employee and management interviews, onsite file reviews, and final report preparation.

Pre-acquisition audit and investigation of a large rice processing facility in Mississippi. The scope of work included reviews of all regulatory files, onsite file reviews and former employee interviews, visual evaluation of the property, and targeted sampling of suspected contamination sites.

Consultant on a large-scale National Institutes of Health (NIH) project investigating health impacts of the Deepwater Horizon oil spill in eastern Gulf Coast communities. Collected creel survey data from subsistence fishers and catch biota samples for contamination analysis.

Watershed-wide contamination assessment and long-term monitoring of a large oil producing area in central Mississippi. Work involved a largescale field reconnaissance, the assessment of chloride impact on surface waters through a review of LANDSAT images, and quarterly monitoring (for five years) of 25 miles of streams and tributaries in a mature oil field.

Hydrogeological evaluation, monitoring system design and installation - municipal solid waste landfill in Mississippi. Analyzed regional and local hydrogeological data to decipher local hydrogeology, installed pilot borings to confirm interpretations, performed EM and gamma ray geophysical logging of boreholes and monitoring well installations, designed a multi-aquifer monitoring system, and carried out an aquifer testing program at a Subtitle D landfill.

RCRA Subtitle D landfill monitoring system design/installation/testing. Project involved review of existing geological and hydrological data associated to resolve the local hydrogeology and design a statistically-effective groundwater monitoring system in coastal Mississippi. Work included drilling and lithological logging of numerous pilot borings to confirm hydrogeological interpretations, monitoring well installations, and aquifer testing.

Hydrological consulting on a project involving the characterization and remediation of acid- and ammonia-contaminated groundwater at a coastal Mississippi fertilizer plant.

Assessment, monitoring, and in-situ/active risk-based remediation of sediment- and groundwater-transported contaminants at over 40 natural gas compressor stations from Mississippi to New York. Delineated horizontal/vertical extent of contamination, monitored sites long-term, remediated soils by excavation and using in-situ injection of chemicals.

Used groundwater computer modeling to quantify drawdown, dewatering, and settlement under a proposed Mississippi coast casino dry-dock. The proposed design required no long-term settlement potential beneath the facility, despite the occurrence of highly compressible subsoils in the area and huge anticipated structural loads. The model showed that groundwater below the facility could be depressed through a system of peripheral shallow and deep wells, so that the soil could be pre-settled, preventing future movement. The overall project won an ENR "Project of the Year" award.

Water-quality/aquifer testing and modeling project. Performed pumping tests and real-time water-quality monitoring on an aquifer in northwest Florida to collect input data for a computer

model that would predict the proper pumping rates for a shallow, seaside wellfield that was experiencing saltwater intrusion. Data were used to calibrate and run a hydrological computer model that predicted saltwater intrusion dynamics.

Hydrogeological study/modeling, Mississippi solid waste landfill. Work involved the correlation and review of existing regional and local hydrogeological data, as well as *new* data gathered from an onsite boring/down-hole geophysics program. Objective was to decipher local hydrogeology and determine if an alternative (natural clay) landfill liner was scientifically sound. Project also involved use of hydrogeological computer models to demonstrate viability of an alternative liner design and modified groundwater monitoring system. Work included map and cross-section generation, pilot borings to confirm interpretations, geophysical logging of boreholes, monitoring well installations, and aquifer testing.

Performed hydrogeological/environmental baseline studies for a National Estuarine Research Reserve administered by NOAA at a coastal Alabama site. The work evaluated (1) the environmental impact of past agricultural land uses in a 63-acre wetland that had suffered from hydrological alterations, invasive species, and a heavy fuel load, and (2) an abandoned mobile home park slated for restoration to its natural state.

Conducted a beach erosion study in coastal Alabama to test the effectiveness of a large-scale beach sediment nourishment project along the northern Gulf of Mexico. Set up multiple baseline transects in both nourished and natural beach areas. Collected samples for grain-size analysis at standard key geomorphological features along each transect.

Feasibility study/design of beneficial use of dredge spoils in coastal Mississippi. Work included grain-size analysis of lagoon sediments near a proposed casino resort of a pilot-scale coastal erosion protection structure constructed using dredge spoils. Work compared native grain sizes to those in spoils material to determine the long-term viability of the project and establish a baseline for post-construction monitoring.

Reverse-osmosis water-supply well testing/replacement in central Florida. Evaluation and testing of a deep, large-scale withdrawal water well that was being used to supply drinking water to a municipality via a low-pressure reverse-osmosis plant.

Baseline aquifer characteristic study of a proposed phosphate mining site in central Florida. Soil borings and test wells were drilled at a large property slated to become a large phosphate mining operation so that a post-mining reclamation plan could be developed.

Regional ambient water-quality study in northern Florida. Hundreds of water wells from various aquifers were identified and sampled for a broad list of parameters to get a baseline snapshot of groundwater quality.

Municipal water-supply wellfield design, installation, and testing in central Florida. Project involved the design of a large-scale withdrawal water-supply wellfield for the Tampa, Florida metropolitan area. The target aquifer and production zones were selected. Test borings were drilled and logged. Several water wells and associated monitoring wells were drilled to depths of over 2,000 feet. These wells were also pump tested and water-quality tested.

Water-quality investigation at a beverage production facility in central Florida. Project involved the drill-stem testing of a water-supply well to determine the source and character of microbial contamination in the aquifer. Zones within the well were isolated using inflatable

down-hole packers, sanitized, then tested to determine the exact source and nature of the contamination.

Aquifer testing, large Defense Department contractor's testing facility. Executed pumping tests and slug tests on several monitoring wells at a large DoD contractor testing facility in central Florida. Analyzed data using computer software to determine a wide range of aquifer characteristics.

Water-supply alternatives study. The scientific literature and regional well logs were reviewed and water-quality data was collected over a large part of east-central Florida to develop water-supply alternatives for a growing area of the state that was experiencing saltwater intrusion in its water-supply source.

Regional water-supply assessment/development project. Project included assessment of water supply and water-quality potential of brackish groundwater resources of a populous county in west central Florida. The purpose of this study was to determine the feasibility of developing several low-pressure reverse-osmosis wellfields as a supplemental source of county water supply.

Performed wetland delineation for oil exploration properties that were located near marsh areas in Mississippi. Work involved site visits, delineation of wetland areas based on flora and soil conditions, and generation of site-specific reports

Multi-phased, multi-year, remedial investigations at ten natural gas compressor stations in Mississippi. Included work plan and report preparation; regulatory interaction and negotiation; and soil, sediment, and groundwater characterization. The contaminants were PCBs and TCL/TAL compounds.

Contamination assessment/risk-based remedial design for waste-oil dump sites. Work involved delineation of soil, groundwater, and sludge impacts at three abandoned waste-oil dump sites, development of risk-based clean-up goals, and remedial design. A site-specific risk assessment was prepared to support a target TPH clean-up level.

Remedial investigations, multiple wood-treatment sites. Work involved assessment of extent of wood-treatment waste (PCP) impact in soil and groundwater in several areas at a large lumber treatment facility. Contaminant included dissolved and free-phased product. Included groundwater modeling and use of surface geophysics (EM).

Senior oversight for a multi-facility chromate contamination investigation at several natural gas compressor stations in west Texas. Project included evaluation of hydrogeological conditions that would affect potential chromate fate and transport (redox geochemistry, flow gradients, hydraulic characteristics, etc.), implementation of a detailed assessment plan involving soil borings/sampling, monitoring well installation and groundwater sampling, aquifer testing, and horizontal drilling techniques.

Groundwater and soil contamination investigations at 35 natural gas compressor stations located in Texas, Louisiana, Mississippi, Alabama, Tennessee, Kentucky, Ohio, Pennsylvania, and New York. Project included program development; preparation of work plans and reports; regulatory interaction and negotiation; and implementation of field activities. Contaminants included PCBs, VOCs, semi-volatiles, and various metals.

RCRA facility contamination assessment/remediation. Work involved a large-scale remedial investigation at a RCRA facility in a highly-faulted area of Alabama. Contaminants were pesticides and related compounds that had been released into the subsurface. Included groundwater sampling and monitoring/recovery well installation.

Remedial investigations at two U.S. Air Force bases. Work involved several multi-phased field events which included soil-gas surveys, installation of soil borings and groundwater monitoring wells, groundwater/soil sampling, and surface geophysical surveys. Contaminants included DDT, nerve agents, and explosive compounds.

Site characterization at 16 natural gas compressor stations in several states. Project included implementation of phased contamination assessment activities, screening of sites for surface and subsurface PCB contamination, and report preparation.

Assessment monitoring, solid waste landfill. Project involved planning and implementation of a gas and groundwater investigation at a Subtitle D landfill that was triggered by detection monitoring results. Included soil-gas surveys, onsite laboratory analysis, soil sample screening, and monitoring well installation and sampling.

Mercury investigations and remedial actions at more than 300 natural gas pipeline metering stations. Project included planning and implementing a series of rapid, coordinated, and cost-effective site characterization and remediation activities at sites located in several states.

Delineation of contamination associated with buried waste pits at a planned industrial park. Work involved the use of remote-sensing images, field reconnaissance, and soil/groundwater sampling to locate oil waste-filled pits and determine the impact of pits on human health and the environment. Contaminants included semi-volatiles and acids.

Contamination assessment/remedial action planning - Mississippi rail yard. Delineated extent of diesel fuel contamination in the subsurface. Work involved the drilling/sampling of soil borings and installation/sampling of several temporary and permanent groundwater monitoring wells.

Remedial investigation, petroleum bulk storage terminal. Involved assessment of soils and groundwater. Work performed included installation of groundwater monitoring wells, groundwater sampling, free-product gasoline finger printing, and remedial planning.

Contamination assessments/remediation at six large petroleum storage terminals in Florida and Alabama. Work involved field contamination screening with a mobile laboratory, soil-gas surveys, installation of soil borings and groundwater monitoring wells, groundwater/soil sampling, free-product gasoline finger printing, remedial planning, and remediation system installation/operation and maintenance.

Contamination assessments and remedial actions at over 30 leaking underground storage tank sites in Florida, Alabama, Mississippi, Louisiana, Arkansas, and Texas. Work included installation of soil borings and monitoring wells, groundwater/soil sampling, free-product gasoline finger printing, remedial planning, and remediation system installation/operation and maintenance.

Contamination assessment at a natural gas transmission facility in central Alabama. Acquisition of soil samples using direct-push method to delineate the horizontal and vertical

extent of soil contamination (PCBs, volatile organic compounds, and polycyclic aromatic hydrocarbons).

Leaking underground storage tank site investigation/remediation. Work involved subsurface investigation and removal of free-phased hydrocarbons from groundwater using Mobile Enhanced Multi Phase Extraction at a gasoline retail outlet in southern Alabama.

Contamination investigation for a large UST facility in Mobile, Alabama. Supervised field activities including soil borings, collection of soil samples for petroleum hydrocarbons analysis, monitoring well installation, site survey, and sensitive receptor survey. An investigation report was prepared under regulatory guidelines.

Leaking underground storage tank site investigation. Acquisition of soil and groundwater samples using direct push method and completion of Risk-Based Corrective Action report for state regulators including risk calculations for a leaking underground storage tank facility in Mobile, Alabama.

Assessment of chlorinated solvents in soil and groundwater at a metal stamping facility in Alabama. Work included characterization of surface conditions; delineation of the horizontal and vertical extent of DNAPL contamination using hydraulically-driven probes and bedrock monitoring well; and use of pumping/slug tests.

Groundwater assessment, long-term monitoring, and remediation at a natural gas compressor station in Alabama. Performed a subsurface investigation of the horizontal and vertical extent of chlorinated solvents contamination; conducted a sensitive receptor survey; installed and monitored onsite and offsite monitoring wells; used in-situ chemical remediation to abate contamination.

Groundwater assessment, monitoring, and in-situ chemical remediation at a natural gas compressor station near Houston, Texas. Involved delineation of the horizontal and vertical extent of subsurface contamination; long-term monitoring; and in-situ chemical remediation of chlorinated solvents.

In-situ chemical remediation of hydrocarbon contamination. Work involved the injection of Oxygen Release Compound (ORC) into the subsurface at a leaking UST facility remediation site in Alabama. Purpose was to affect in-situ remediation of released petroleum hydrocarbons by altering redox chemistry of the local aquifer and vadose zone.

Site investigation, remediation, and post-remediation groundwater monitoring. Performed at a natural gas compressor station facility in New York. Hydrogen Release Compound (HRC) injected to induce reducing conditions in the local aquifer and promote in-situ biochemical remediation of chlorinated solvents.

Assessment, monitoring, and in-situ remediation of groundwater at a natural gas compressor station in central Kentucky. Delineation horizontal/vertical extent of contamination, monitored long-term, and remediated chlorinated solvents using in-situ injection of chemicals use of ambient down-gradient reducing conditions. Long-term post-remediation groundwater monitoring was also performed.

Remedial construction oversight. Performed in association with the excavation and disposal of 169 tons of PCB and petroleum hydrocarbon contaminated soils. Area was back-filled and restored.

Hydrogeological evaluation of several industrial and solid waste landfills. Used new and previously collected geological data to support several industrial and solid waste landfill expansions along the Mississippi coast, including public-hearing support.

Landfill monitoring system design/installation/testing, solid waste landfill. Project involved design of an effective groundwater monitoring system to satisfy permit requirements and RCRA Subtitle D requirements.

TEACHING & STUDENT MENTORSHIP

College Courses and Seminars Taught - University of South Alabama

Hydrology (Graduate and undergraduate course)
Contaminant Hydrology (Graduate and undergraduate course)
Water-Supply Hydrogeology (Graduate and undergraduate seminar)
Geophysics (Undergraduate course)
Groundwater Modeling (Graduate and undergraduate seminar)
Geology Field School (Undergraduate course)
Earth History (Undergraduate course)
Physical Geology (Undergraduate course)
Interdisciplinary Research Methods (Undergraduate course)

Students Mentored - University of South Alabama

Environmental Toxicology Graduate Students (as Thesis Committee Chair): 7
Environmental Toxicology Graduate Students (as Thesis Committee Member): 6
Biology Graduate Students (as Thesis Committee Member): 2
Civil Engineering Graduate Students (as Thesis Committee Member): 1
Marine Sciences Graduate Students (as Thesis Committee Member): 1
Undergraduate Honors Students (as Thesis Committee Chair): 1
Undergraduate Interdisciplinary Studies B.S. Theses (as Thesis Committee Chair): 2
University Committee on Undergraduate Research Students (as Mentor): 4
Undergraduate Directed Research Students (as Advisor): 42
