

Since 1988, we have provided manufacturer representation and distribution for quality Civil Engineering construction products. Our services include design, design assistance, product supply, and field oversight during installation. Our product line includes handrails, floating docks, fixed docks, fishing piers, wave attenuators, pedestrian bridges, boardwalks, and seawall materials.

## Products

- Handrails for sidewalks, pedestrian paths and bridges
- Fixed and floating docks with aluminum substructure
- Aluminum sheet piling
- Other miscellaneous metal fabrications
- We also provide water control gates, geosynthetics, and miscellaneous metal fabrications

*'More people would be in favor of progress if it could be accomplished without change'*

## Awards

In 2002, we invented and patented a system of picket handrails that requires no welding of the pickets.

This system earned us the FES/FPEI 2006 Governor's New Product Award, plus the 2007 NSPE/ PEI New Product Award.

We've earned Department of Transportation approvals from Florida, Virginia, New York, Alabama, Georgia, and South Carolina.

Most of our handrails are manufactured from aluminum alloy 6061-T6. This alloy has both high corrosion resistance and high strength. AA 6061-T6 has a yield strength of 35,000 psi, comparable to the yield strength of ASTM A-36 steel at 36,000 psi.
