CELESTIAL LINES OF PERSEPOLIS

The very gate to the *Hall of all the Nations* had *Winged Bulls* that served as its sentinels. It is well understood that the ancient peoples aspired to mirror the Stars of the various constellations on Earth and had their major political, social and religious centers and temples built on such astronomical ley-lines. These in turn functioned on a principle of pure mathematics as certain aspects of the 'Pleiadian' city can be brought out. The alignment to the Pyramids of Mexico and that of *Orion* and the *Great Pyramids* of Egypt does have a dual configuration. On one hand, when one superimposes the Giza alignment of the *Great Pyramids* of Egypt to pag the smallest pyramid, that of *Menkaure* to the *Traffic Circle* which is the smallest of the 3 'Stars' leading up to the *Persepolis Gate*, the ley-lines intersect the structures approximately that have the 'Star' configurations. The *Traffic Circle* is correlating to the 'V' apex of the *Taurus* layout. Given this apparent template of the constellation *Taurus*, the entire Persepolis complex suggests that the end or termination point of the overlay focused on the Star cluster of the *Pleiades*. The endpoint of the *Royal Road* ended at the *Gate to Persepolis* or perhaps the 'Star Gate' to the city of the 'Pleiadians' no less. What is also amazing is that these 3 apparent 'Stars' are in size proportion from smallest to largest as are the *Great Pyramids* of Egypt of which they get their pattern from *Orion's Belt*.

GATE ENTRANCE TO PERSEPOLIS
'Star Gate to the Pleiadian Palace'

If one however, reverses the *Great Pyramid Complex* alignment to have the *Great Pyramid* pegged to the smallest 'Star' configuration of the *Traffic Circle*, then the alignment of the Pyramid centers with the Persepolis 'Stars' match exactly in size and even in depiction as 'inverted' Stars geographically, which is astonishing.

PLEIADIAN PALACES OF PERSEPOLIS

The illustrations will attempt to show this as there does appear to be an approximated depiction and alignment of buildings with the *Pleiadian Star Pattern*. In other studies of ancient sites that have incorporated such celestial patterns of Stars, some highlighted certain Stars in their layouts. This could be based on the time and aspect of the *Precession of the Equinox* the construction of the sites had in relation to the constellations, etc. The main structures of the core of Persepolis consisted of the famous *Apadana* or meeting hall. This was called the *Hall of Darius 1* and took 30 years to complete. It is also very interesting that the titles of these monarchs included, 'King of Kings, and Lord of Lords'. This is the same title that is ascribed to Jesus Christ and that of the Messiah. It had amazingly 72 columns that suggest 1 degree of Precession in terms of cosmic time. The tail-tell sign of the astronomical inference incorporated into the Halls is noted in how the columns had only 4 types of capitals, that of *Bulls, Lions, Eagles and Men*. These are the same as those found depicted in the Bible of how the *4 Living Creatures* are some sort of 'markers' and 'sentinels' around the *Throne of YHVH*, the Creator in Heaven. Also, astronomically, the 4 corners of the Cosmos is stationed by such 'Signs' to pertain to *Taurus, Leo, Aquarius and Scorpio* (Eagle in ancient times). The Pleiadian Star of *Alcyone* would thus correspond to the famous Hall of Xerxes that had the 100 columns, etc. This 70 x 70 square meter hall was started by Xerxes I and completed by his son Artaxerxes I. What is also very interesting to consider is that although highly suggestive as well, the *Belt Stars of Orion* appear to match the cross-section of the core structures of Persepolis.
