

## **2010 Drip Plate conversion**

Made to retrofit Aqua-Link wet dry filter models 2010, 2010 EXT, and 2030.

Made of sturdy ¼" cell cast acrylic measures 9.5 " x 9.5"x ¾".

Fitted with 1" tubular vent to allow gases to escape. This vent doubles as an over flow tube in the unlikely event that it would back up, excess water would still flow into the main chamber.

Split design allows access to utilize mechanical filter floss over the drip tray in the absence of a pre-filter.
