

# Vs Tensorgrip EPO-CA

Commonalities:

- ➔ Both are contact adhesives used to adhere FRP liners to the foam insulation in refrigerated trailers.
- ➔ Both are applied in identical fashion with identical equipment and neither require blocking and bracing.
- ➔ Both come in similar packaging and use identical spray equipment.

**This is where the similarity stops.**

	Tensorgrip EPO-CA	REEFER BOND Lightning Quick Liner Repair
Tank Weight	24 lbs.	28 lbs.
Percent Solids	33%	45%
Application	Pressurized spray	Pressurized spray
Solvent System	Methyl acetate	Hydrocarbon
Odor	Objectionable	Slightly sweet
Color	Pink/red	Green

 retains a high level of “tackiness” even after the solvent flashes. This initial “grab” contributes to the ease of installation.

 has **very little odor**. Everyone in the shop will appreciate this.

While tank cost can be a key selling point, the key ***is installed cost per wall***. With 50% more adhesive in each tank,  is the clear winner with ***typical installed cost savings of over 20%***.

The true bottom line is the robustness of the bond. Common feedback from installers over the last few years includes words like “**factory level of bonding**” - a true testament to the quality of .
