- Oil & Gas structural steel skids & pipe mods
- Conventional structural steel buildings
- Custom handrails, ladders, platforms

Customized Fabrication Solutions for Your Industry

Custom steel fabrication isn't easy, and you don't want just any rookie taking on your job. You'll need skilled craftsmen to get it done right.

Safeguard's fabrication division is a CWB (Canadian Welding Bureau) certified fabrication shop, providing custom steel fabrication services to meet your facility requirement needs.

We specialize in:

- Oil & Gas structural steel skids & pipe mods
- Conventional structural steel buildings
- Custom handrails, ladders, platforms

Our custom fabrication services also include our proprietary Safeguard Anchors, Go-Box™ Portable Fall Protection System, Davit Arm & Base Assemblies. We also fabricate custom equipment such as gantry cranes and several other material handling solutions. Popular finish options are primer, safety yellow, safety green and hot dip galvanized.

Structural Skid Fabrication Services

Our 26,000ft² free-standing Canadian fabrication facility sits on a 2.5 acre parcel that enjoys direct access off 114th Ave in Calgary, AB, allowing easy truck transport for larger skid packages. The building features one 10T & two 20T cranes with 27ft hook height. Our floor plan allows Safeguard to fabricate 24" or 30" beam skids up to 120ft long and 24.5ft wide, with the potential for outdoor storage for other contractors to work on these units to completion.

CWB Engineered Services

Throughout Canada, it is a legal requirement that all steel structures, including tank supports, welded-on tank access ladders, and small portable structures like skid packages, be fabricated and erected by CWB (Canadian Welding Bureau) certified companies. To be certified as Division I, a company must employ a CWB certified welding engineer. To be certified as Division II, a company must retain a CWB certified welding engineer.

Why Choose Safeguard Fabrication?

Safeguard meets all CWB requirements! We provide CWB Engineering services to companies that require CWB certification to Division II as a component of their structural steel fabrication and erection operations. Safeguard's CWB certified welding engineers will guide your company through the process of obtaining and maintaining CWB certification (CSA W47.1). So whether you need handrails, stairs, ladders, platforms, railings or any other fabricated safety related products, Safeguard Fabrication services will deliver!

Contact us today to arrange a tour of our new facility and discuss the details and how Safeguard can assist with your fabrication requirements.
