

Capacity Statement for CASE Consultants International

CASE Consultants International applies climate arts and sciences expertise to inform real-world decisions in climate adaptation, sustainability, and resiliency. CASE customizes advice and services to meet specific client needs for tactical projects or strategic programs. CASE connects science to solutions.

Our Services:

CASE works collaboratively with professions immersed in adaptive resiliency solutions. Finding themselves on the front line of climate change adaptation, our clients use the robust climate services expertise that CASE provides. CASE mainstreams climate knowledge into practice. Sample collaborations:

- Climate Wise Brownfields – examines climate change and brownfield redevelopment using an extensive array of case studies from EPA regions such as the Southeastern US.
- Game-Changing Resilient Infrastructure - identifies threats to infrastructure from climate change and illustrates adaptive opportunities using state-of-the-art green infrastructure.
- Climate Adaptive Design: Where Building Science Meets Climate Science - a recurring collaboration with the Asheville Section of the American Institute of Architects where design with climate is the focus of the symposia.
- The Climate Resilient Grid Forum - a continuing initiative that connects climate scientists and energy experts to plan future energy systems.

Our Expertise:

CASE associates are subject matter experts in climate and environmental sciences, city and regional planning, and climate services and policy. Collectively, CASE informs decision-makers as they plan for the impacts of climate change. CASE has strong relationships with professionals in land development and infrastructure sectors, including:

- American Planning Association (APA)
- American Public Works Association (APWA)
- American Society of Landscape Architects (ASLA)
- American Public Health Association (APHA)
- American Institute of Architects (AIA)
- Urban Land Institute (ULI)

Our Customers Include:

Our Products:

Products and services are client-defined. We link end-users with climate data relevant to their needs. Through community engagement, CASE guides cities and small towns through actionable steps from vulnerability to resiliency to prosperity, and enhances their resilience to natural and economic disruptions following disastrous weather events. Sample products:

- National and Global Frameworks for Climate Services
- Adaptation and resiliency strategies for cities and small towns
- Sustained assessments and strategies with USGCRP government agencies
- Climate-induced displacement primer for international environmental attorneys
- Climate variability and change impacts on transportation infrastructure with the Transportation Research Board
- Predictive algorithms for respiratory health and vector-borne diseases - DailyBreath-asthma and ZikaZoneUSA
- Climate change considerations for the long-term real estate investor and development industry in the Eastern US
