

Myshroom Immune Health Blend

Why should this medicinal mushroom food be used?

The chemistry that comes from the combined hybrid strains of medicinal mushrooms originally cultivated at research laboratories at universities shows that it: (this is when you consume it as a food)

- A miraculous food that has over 4,000 beneficial chemicals including all of the essential amino acids, transition metals, enzymes and proteins, which by far exceeds the beneficial chemistry and nutrition of any other food on earth.
- Supports the Strengthening of the immune system, more T cells are produced.
- Supports the modulation of the immune system so there is no over activity as with autoimmune diseases.
- The mushrooms strains create and secrete an array of antiviral, antibacterial, antifungal, and antiparasitic compounds. Antibiotic compounds isolated from these mushrooms includes, coprinol, campestrin, ganomycin, sparassol, armillaric acid, cortinellin, and ustilagic acid.
- The chemistry supports cell communication, there is endogenous [eicosanoid](#) molecules in the myshroom® medicinal mushrooms. [Interleukin \(IL\) -1](#) is a [pluripotent](#) and proinflammatory [cytokine](#) that orchestrates inflammatory and host-defense responses. The mushrooms contain campestrin, a natural antibiotic effective against Gram negative and some Gram-positive bacteria and has been used traditionally to treat tuberculosis and sinusitis.
- Supports the increased production of ATP molecules and other beneficial chemistry so that your own stem cells can work more aggressively and efficiently in repair of damaged tissues.
- There is the sulfur-containing antioxidant Ergothioneine and Glutathione in this mushroom chemistry.
- Gives the body a high level of energy which far exceeds any other food measured on earth. Using just 32 grams (12 to 13 teaspoons) of the product with water can sustain a person and it can provide all of the above listed. This has been tested. This is the best food for the famine regions of the world.
- Studies show there is no chronic or acute toxicity. Cell nucleus studies show no detrimental effects and DNA showed no mutations. Pregnant animal studies demonstrated there is no detriment to fetal development, and no LD50, a measure of toxicity that has never been shown. These Medicinal mushrooms apparently produce no harmful side effects.
- These substances in these hybrid medicinal mushrooms are regarded as biological response modifiers. This basically means that:
 - they cause no harm and place no additional stress on the body;
 - they help the body to adapt to various environmental and biological stresses; and
 - they exert a non-specific action on the body, supporting some or all of the major systems, including nervous, hormonal, and immune systems, as well as regulatory functions.
