## SOLAR INSPECTION

**PRICING: \$400 FOR MOST STANDARD GRID TIED RESIDENTIAL SYSTEMS**

**Dear Real Estate Professional,**

As you see you in your daily activities, there are more and more transactions involving Solar Electric Systems.

To a casual observer there are a bunch of solar panels on the roof or on a ground mounted structure, but as you know there are much more to these systems than meet the eyes.

There are several types of systems such as: Roof Mount, Ground Mount, Grid Tied, Off Grid, Hybrid, String Inverters, Micro-Inverters, and DC Optimizers.

The buyers are more and more aware of these systems and want to know:

Is the system working properly?

What is its worth?

How does it work?

Has it been installed properly?

How much power does it produce?

What are the risks?

Is it insurable?

Does it have warranty?

What is it's present condition?

How do I maintain it?

### California Leads the Nation

- **479,507** solar projects
- **3,790** megawatts installed
- **\$5.32** avg cost/watt <10kW
- **\$4.30** avg cost/watt >10kW
