

WINGTO

You're in good company when you take up the bow and arrow today. About 5 million Americans enjoy archery now, and the sport is getting hotter all the time. If you're an old hand at it, you know why. If you're a new archer, you're in for some excitement that archers have been discovering since the days when cavemen brought down their meat with the arrow or warriors took their trusty bows to the battlefield.

There's still the fascination of seeing strength and skill send an arrow straight to its target with speed and accuracy. Still the thrill of that moment as you draw with your sight on the prey. But there's a lot more too.

You have the time now to really relax and enjoy shooting—whether you take to the back yard with the kids, step up to the line for big competition, or camp out in the woods for a weekend hunt. Even if you're not an advanced shooter yourself, you can follow the big tournaments—and in 1972 the Olympic competition—and get tips from the experts in magazines, newspapers and on TV. You can get started off right, or improve your style, by joining one of the classes opening up all over for children and adults. You can share the fun of the sport with fellow archers in employee groups or neighborhood clubs. And you have the benefit of equipment that has been designed and built with all the advantages of modern research and technological advances.

That means there's something for everybody. Something just for you, whether you're a man, woman, or youngster . . . bowhunter, target or field shooter . . . novice or old pro. But you might need help finding the equipment that fits your exact individual needs. Wing Archery can give you that help. We pride ourselves on having dealers who know archery, know their equipment thoroughly, know the needs of every kind of archer. A Wing dealer can outfit you correctly, and completely, to make the most of your shooting.

It's that way throughout the Wing organization. Everybody involved in making your bow is an archer. Archery is more than a business to them. And since they all shoot, themselves, they know how much every little detail counts to the competitor with his aim on the gold ring or the hunter facing a big buck. With this kind of dedication, Wing has made some of the industry's great gains in standardizing the quality of bows. You can't be happy about buying a bow and then finding that it's not quite like the one of the same model you tried in the store. But Wing has some proprietary techniques to guarantee consistency in the bows we make. One

bow won't be a surprise after you've tried another of the same model.

But with its innovations and up-to-the-minute production techniques, Wing combines old-fashioned craftsmanship that no machine can provide. Specialists check every bow for weight, alignment, tiller. It's an art, something they have been doing for years, too tedious to learn from a textbook. Wing's bowyer has 15 years in the business to draw on. Even the president of the company still considers it an important responsibility to personally keep an eye on production.

So go ahead and enjoy this fast-growing pastime. And, if you're smart, you'll let Wing make it all the better for you.

Bob Lee, president of Wing Archery, takes every opportunity to check Wing products where it really counts—on the hunt and at the range. Despite his busy schedule, he still keeps a close eye on the products that carry the Wing name.

RED WING HUNTER

Here's the bow the professional game hunters swear by. It's rugged without frills — the kind of bow that gets the job done time and again. More and more hunters are turning to it. More and more bow makers are trying to copy its design. Year after year, Red Wing users bag trophies that continue to gain this bow the attention of the hunting world. The Red Wing comes in two lengths — the extra-compact new 52" length, ideal for shooting from tight spots; and the familiar 58" model that has proved so popular. Both lengths travel easily. The Red Wing styling features a riser of shedua. The glass is brown.

AMO Lengths: 52" and 58"
Weights: Up to 70 lb. in 28" draw length
Draw Limit: None
Fistmele: 8½"-9¼"
Riser: Shedua
Glass Color: Brown
1008/\$59.95

All specifications in this catalog are in accordance with standards of the Archery Manufacturers Organization.

THUNDERBIRD

Here's a black beauty for the man with special tastes. The handle riser is high-compression bowflex to give it plenty of mass weight. It comes in a 52" length ideal for the hunter who wants real compactness for tight situations, and in a 62" length for the hunter who likes the feel and the added stability of a longer bow. Many of its design refinements are inherited from the Presentation II Hunter. The Thunderbird's limb design provides both ultra-smoothness and maximum cast.

AMO Lengths: 52" and 62"
 Weights: Up to 70 lb. at 28" draw length
 Draw Limit: None
 Fistmele: 8½"-9½"
 Riser: Black bowflex
 Glass Color: Black
 1006/\$94.95

CHAPARRAL

The performance, materials and workmanship of this 60" hunter make it one you'll be proud to own and use. The handle is of high-compression bowflex and African bubinga. The lamination is white maple, and the black and white cap has nock overlays to match. The Chaparral combines the mass weight of bowflex for smoothness with advanced limb design for that extra speed so necessary for bagging that big trophy.

AMO Length: 60"
 Weights: Up to 70 lb. at 28" draw length
 Draw Limit: None
 Fistmele: 8"-9"
 Riser: Black bowflex and African bubinga with white maple lamination. Cap of ebony black and pearl white.
 Glass Color: Black
 1007/\$89.95

PRESENTATION II

The finest of everything in a bow — looks, feel, and performance — is all here in the Presentation II. This is Wing's proudest accomplishment. The target model is the basis for the styling of all our target bows and the model looked up to by the pros. The Presentation II Hunter

in 58" and 62" models is the ultimate in a hunting bow. The exclusive limb-coupling feature turns the Presentation II from an excellent target bow into a fine hunting bow or a ladies' target model — all with a simple change in limbs. There are two handles and six different limb combinations to choose from. With a sight window placed $\frac{1}{8}$ " past center, the Presentation II gives natural alignment in sighting. It has five stabilizer positions and a built-in stabilizer insert adapter.

Your shooting can't help but improve with the benefit of the grip design that discourages torquing during the draw. The Presentation II comes with its own padded takedown carrying case and stabilizer. It is also available with the optional custom carrying case.

AMO Lengths: (Specify long or short handle)
Long handle — 62", 68", 70"
Short handle — 58", 64", 66"
Weights: 58" and 62" — Up to 60 lb.
Other lengths — Up to 50 lb.

Draw Limit: None
Fistmele: 8½"-9½"
Riser: Black bowflex and rosewood with cap of ebony and pearl white
Glass Color: 58" and 62" — Black
Other lengths — White

1001 / \$225.00

Handle / \$140.05

Limbs / \$84.95 pair

PRESENTATION I

When you measure accuracy by a fraction of an inch, you'll appreciate the refinements of this top-performance bow. The features of the Presentation II are all here — only the flexibility of limb-coupling is missing. The mass weight of the Presentation I is just what

competitive archers want. Its grip gives you built-in steadiness at the crucial moment. The sight window is cut $\frac{1}{8}$ " past center for natural alignment. Other important features include the built-in stabilizer insert adapter. The riser section of the Presentation I is high-compression bowflex and rosewood with an African bubinga lamination. The cap is contrasting ebony and pearl white. Price includes padded vinyl bow case and stabilizer.

AMO Lengths: 66" and 70"
Weight: Up to 50 lb. at 28" draw length
Draw Limit: None
Fistmele: 8½"-9½"
Riser: Black bowflex and rosewood with African bubinga lamination and cap of ebony and pearl white
Glass Color: White
1002/\$175.00

WHITE WING

The White Wing duplicates most of the features of the Presentation bows — but at a lower cost. Its riser section is of African bubinga and rosewood with a rosewood lamination. Rosewood, with white maple, is used again in the cap. The grip is created to fit naturally in your hand. The sight window, $\frac{1}{8}$ " past center, provides natural alignment. And a stabilizer insert adapter is built in. All in all, the White Wing is the bow that matches more expensive bows, point for point, but stands alone when it comes to economy. Price includes padded vinyl bow case.

AMO Lengths: 66" and 70"
Weights: Up to 50 lb. at 28" draw length
Draw Limit: None
Fistmele: 8½"-9½"
Riser: African bubinga and rosewood with a rosewood lamination and cap of rosewood and white maple
Glass Color: White
1003/\$130.00

SWIFT WING

A fine competition bow that gives you looks, smooth draw and excellent cast. The Swift Wing is easy on your budget. Its 66" length also makes it ideal for multiple purposes — target shooting, hunting, or as a ladies' tournament bow. In shedua with an African bubinga lamination, the handle riser has a handsome appearance fit for the kind of performance the Swing Wing delivers. It has the basic look of the Presentation bows, and the built-in stabilizer insert adapter as well.

AMO Length: 66"

Weights: Up to 50 lb. at 28" draw length

Draw Limit: None

Fistmele: 8½"-9¼"

Riser: Shedua with African bubinga lamination and cap of bubinga and white maple

Glass Color: White

1004/\$84.95

SILVER WING

Much more than a beginner's bow—the Silver Wing is designed especially for the archer who is looking for a stepping stone to serious shooting. You can carry this bow to the line with confidence. It has many of the capabilities of a top-of-the-line model and will help you learn technique and establish consistency. With an exotic hardwood riser, the Silver Wing gives you styling qualities found in the Presentation at a reasonable price.

AMO Length: 66"

Weights: Up to 50 lb. at 28" draw length

Draw Limit: None

Fistmele: 8½"-9½"

Riser: Exotic hardwood

Glass Color: White

1005/\$69.95

GULL

An all-purpose bow at a modest price, the Gull incorporates all the features of a 64" hunting bow with the smoothness and accuracy of a competition bow. It has full working recurves, and the riser is of exotic hardwood.

AMO Length: 64"
Weights: Up to 60 lb. at 28" draw length
Draw Limit: None
Fistmele: 8"-9"
Riser: Exotic hardwood
Glass Color: Brown
1009/\$49.95

FALCON

The Falcon is well suited for the budget-minded archer who doesn't want to sacrifice quality and performance. This bow lets you shoot like you want to shoot, and enjoy the results. Its full working recurves and form-fitting handle, wide overdraw and full-center sight window will give you the real feel of archery. You'll like the attractive riser of exotic hardwood. And the price is easy on your pocketbook.

AMO Length: 62"
Weights: 20 to 50 lb. at 28" draw length
Draw Limit: None
Fistmele: 7½"-8½"
Riser: Exotic hardwood
Glass Color: Assorted
1010/\$39.95

NIGHTHAWK

Here is the perfect bow for the beginner — designed to help you develop technique easily and gradually. Its semi-recurved limbs deliver all the accuracy and cast found in more expensive bows. The Nighthawk has a hardwood maple riser and colored glass limbs.

AMO Length: 60"
Weights: 15 to 35 lb. in 5-lb. increments at 28" draw length
Draw Limit: None
Fistmele: 7½"-8½"
Riser: Hardwood maple
Glass Color: Assorted

ARROWS

Precision is the key ingredient in the craft of arrow making. To this end, Wing Archery Company has installed the finest arrow-making equipment available, trained a cadre of arrow craftsmen, and established the most stringent quality control procedures possible for arrow making.

Wing makes three basic types of arrows—aluminum, fiberglass and wood. Every arrow that bears the Wing name is manufactured in the Wing plant and inspected to the highest set of standards in the industry. As a result, you can be confident that dollar for dollar the Wing arrow you choose will give you the best performance of any comparable arrow on the market.

In choosing the proper arrows for your bow, we recommend that you consult your dealer. He will see that you are fitted for the proper draw length and that the arrows you buy are the ones that best match your shooting requirements and bow weight. Remember, even the most expensive bow is of little value when you use the wrong arrow.

EASTON X7 The finest arrow available anywhere at any price. The Easton X7 shaft is the strongest, most permanent set-resistant precision shaft ever produced. Beautifully hand crested, the X7 features the new Bjorn nock for added comfort and accuracy, and helical fletching of appropriate length. The X7 arrow is available in all nine X7 sizes. (Refer to sizes on page 21.) **2001/\$39.50 doz.**

WING'S ALUMINUM TARGET ARROW An economically priced, professional-grade aluminum target arrow. Shafting is Easton's 24 SRT-X alloy. Beautifully crested with helical fletching of appropriate length. Available in six shaft sizes: 1616, 1716, 1816, 1916, 1718 and 1818. Specify bow weight and draw length when ordering. **2002/\$24.50 doz.**

WING'S RED WING ALUMINUM HUNTING ARROW Your best value aluminum hunting arrow. Easton's 24 SRT-X shafting. Dull red anodizing to eliminate glare. Attractively crested. Helical fletching of appropriate length. Available in five shaft sizes: 1918, 2016, 2018, 2020 and 2219. Specify bow weight and draw length when ordering. **2003/\$30.50 doz.** (H-1 Single-Blade Razorhead)

WING CUSTOM GLASS ARROW The new Wing Custom Glass Arrow is the finest arrow of its kind. Straight, tough and unaffected by temperature or moisture, carefully graded for uniformity. The custom glass arrow features attractive dip and multi-colored cresting. Full 5" helical fletch. Available in sizes accommodating a wide range of bow weights. Specify bow weights and draw lengths desired. **2004/\$23.95 doz.**

WING GLASS ARROW The Wing Glass Arrow is the best standard-grade glass arrow of its kind. Made of the same material as the custom glass arrow. Full 5" diagonal fletch. No dip or cresting. Available in lengths and sizes identical to those of the custom glass arrow. **2005/\$19.95 doz.**

ALL ALUMINUM AND GLASS ARROWS ARE AVAILABLE AS FOLLOWS:

	Wing Aluminum Arrows	Wing Custom Glass

WING BOWFISHING KIT

Wing's complete kit gives you every accessory needed to enjoy many hours of bowfishing thrills. There is 50 feet of 90-pound test braided line, round aluminum reel with bracket for taping to bow, and the toughest fiberglass arrow made with easy-off, case-hardened harpoon head.

6001 Complete Kit (Excluding Bow) With Double-Barbed Point (6005)/\$6.30

6002 Reel and Line/\$2.95

6003 Layfletched Arrow With Easy-Off Point (6005)/\$2.50

6004 Layfletched Arrow Without Point/\$1.50

6005 Double-Barbed, Easy-Off Harpoon Head With Case-Hardened, Easy-Off Tip/\$1.00

6006 Extra Double-Barbed, Easy-Off, Case-Hardened Tip/\$.65

6007 Extra Shank for 6006 Tip/\$.35

6008 Line, 50 Feet, 90-Pound Test/\$1.00

6009 Extra Layfletch/\$.35

AQUA-KILLER SINGLE-BARBED POINT

No time lost trying to remove point from fish. Completely closes. Automatically opens to 2" on drawback when retrieving game.
6010/\$1.25

MAC'S BOW REEL

A sturdy 11 1/4" diameter solid steel reel with detachable brackets. To attach, tape padded brackets to bow. Reel mounts so that arrow is shot through center of reel, assuring even feed-off of line. Complete with 70 feet of 80-pound test nylon line. Arrow clips hold arrow securely when traveling. Fits all bows. Allows minimum drag and maximum accuracy.
6011/\$6.45

KNIFE AND FILE KIT

A must for every bowhunter. File and whetstone for sharpening broadheads and hunting knife. Olson knife with 4 3/4" Solingen steel blade. Leather carrying case has pocket for accessories. Snap-on belt loop feature.

5032/\$12.95

WING BOW QUIVER

This new, lightweight quiver is made of aluminum and nylon. It won't scratch or mar your bow or interfere with shooting. The arrow clamp securely holds six arrows of any size. Right- or left-handed archers can use the same quiver. It's easy to attach and load, and it keeps your arrows right at hand for quick, smooth take-out.

An important feature of this new quiver is the adjustable sliding brackets that attach to any bow in seconds. The brackets screw directly into the adapters in Wing bows. (The Thunderbird, Chaparral, and Red

Wing Hunter come with screw insert adapters built in at no extra cost. A special adapter is available for the Presentation II, and a universal adapter pad is available for all other bows.)

- 5001 / \$16.50
- 5002 Arrow Clamp / \$2.95 ea.
- 5003 Rod Clamps and Screws / \$2.25 pair
- 5004 Tape-On Pads / \$.75 pair
- 5005 Cup Insert / \$.75 ea.
- 5006 Brackets (Complete) / \$2.95 pair
- 5007 Allen Wrench / \$.15

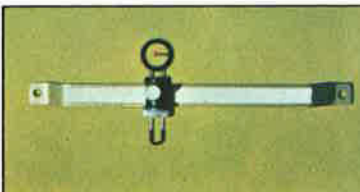

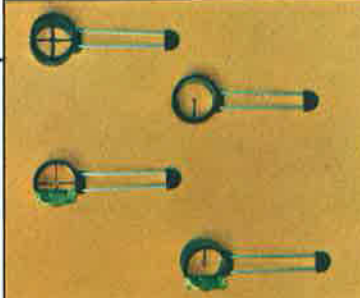

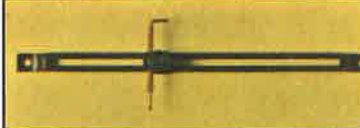

NOCKS, POINTS, ARROW RESTS, BOWSTRINGS AND BOWSTRING ACCESSORIES

	<p>BJORN NOCKS Most precise nock made. More comfortable because of smooth design. Has snap action on string. Specify size: 1/4", 9/32" or 5/16". 7001 White / \$1.00 per doz. \$7.50 per 100 7002 Fluorescent Orange or Green (Specify) / \$1.10 doz. \$8.30 per 100</p>		<p>PROFESSIONAL BOWSTRING Comes in clear plastic carrying case. Extra-strong double-loop black Dacron string with full mono-filament serving. Specify length: 66", 68", 69", 70" or 72". Specify bow weight. 8-, 10-, and 12-strand strings only. 7013 / \$2.00</p>
	<p>MYCRO INDEX NOCKS Specify size: 1/4", 9/32", 5/16" or 11/32". Specify color: red, yellow, black, white, blue, orange or green. 7003 / \$.40 doz. \$2.00 per 100</p>		<p>PRO-TECTO-TIP Lightweight plastic protects bow tip. Holds string securely in place. 	WING SIGHT EXTENSION Easily mounted on side of bow with four small screws. Can be extended forward or backward, and has vertical adjustment to align sight with bowstring. A must for tournament shooters who want perfection. 8006/\$10.95		
	UNIVERSAL ADAPTER BAR FOR WING SIGHT EXTENSION For longer sight bases. 8007/\$1.00		

HUNTING TIPS

When you're preparing for your hunting trip, keep in mind that the bowhunter is always at a disadvantage to his prey. Anything you can find to help your chances is all to the good. This means the best equipment and whatever accessories you can take — camouflage, string silencers, brush buttons, buck scent, game calls. It also means practice. The beginning archer, who has probably stayed close to the target to develop his shooting skills, shouldn't make the mistake of thinking that's all he needs. Shoot at various distances before you go, to get the feel of the real situation.

To find the best places for game, talk to residents in the area or do your own looking for tracks and other signs of animals. From then on, your most profitable virtue will be patience. Whether you stalk or shoot from a stand, your success will depend largely on patience. Most game is shot from a stand, or by blind hunting. This requires that you make no movement and no sound, that you be downwind, that you always be alert, and that you wait as long as you need to. If you prefer still hunting, or stalking, move only a short distance at a time, then stop and check carefully for game.

When you spot your prey, draw as quickly but quietly as you can. The best aim is low and directly behind the shoulder. Remember that the animal will die by hemorrhaging, so it is advisable to leave it for a while after the arrow hits.

SHOOTING TIPS

A most important aspect of good shooting is the equipment. It is essential first that your bow be the proper weight. (In archery, "weight" refers to the amount of effort required to draw a bow 28".) You can't control a too-heavy bow, and the effort will wear you out. For most men, the most popular weight for a hunting bow is 40-50 lb. Target shooting, since it involves many more shots in a short space of time, requires a lighter bow, 35-40 lb. Women and juniors usually need a bow about 10 lb. lighter than men, and youngsters take still lighter models.

Length is important too. The longest bows work best for target and field shooters, who require more stability. The short models are better suited to bowhunters, who need compactness for shooting from brush and trees and for convenience in packing. Some hunters, though, prefer somewhat longer bows for their added stability and accuracy.

Having the right arrow is another major factor in good shooting. Your arrow must have the correct amount of stiffness ("spine") for the bow you are using, so that it will bend just enough to pass the bow without going off track.

To string the bow, it is best to use a bow stringer. This will eliminate the risk of injury and the chance of twisting the bow limbs.

Once you're ready to shoot, you might find — whether you're a beginner or an experienced archer — that you're bothered by some common problems.

Many new archers are unable to keep the arrow on the arrow rest. If this happens to you, you probably don't have your fingers hooked around the string. As you draw, you would tend to tighten your fingers — and roll the arrow off the rest. To avoid this, keep the back of your hand straight and hook your fingers well around the string. Then when you draw, your fingers will not roll the arrow off the rest.

A second common problem for beginners is hitting the inside of the bow arm with the bowstring. There's no way to keep the string from ticking your arm as it rebounds. It happens even when you shoot properly. But you can keep

that tick from hurting by wearing an arm guard. This is essential equipment for anyone who shoots a bow—from world champion to first-timer. If you consistently get hit behind the arm guard, try rolling your elbow out when you draw.

If your arrow appears to fly erratically, it could be due to improper nocking. Be sure the arrow is nocked 1/8" above a line perpendicular to the string.

Forgetting to anchor is another common fault for novice archers. You should think of the anchor — a spot on your face to which you draw every time for the sake of consistency — as comparable to the rear sight on a rifle. Even if you shoot instinctively, you need to use that anchor point. Make sure it is a place you can feel and can come to easily every time you draw. The instinctive shooter's anchor should be directly under the eye. The archer who uses a bow sight needn't have his anchor right there, but he too must be sure to use one place consistently as anchor.

A more experienced archer can have trouble with his anchor too. If you shoot instinctively and you seem to be shooting low, check your anchor to see that it hasn't become too high. If you shoot consistently high, your anchor may be too low. If you're shooting to the left (assuming you are right-handed), you might be anchoring too loosely — too far to the right. Or if your shots seem to go to the right too often, see if you are anchoring too much to the inside.

The same conditions could have other causes, though. Shooting to the right (for a right-hander) could result from "collapsing" — the arms and shoulders drooping inward — at the moment of release. If your arrow tends to go to the left, it could be that you are "exploding" when you release. To eliminate this problem, make sure you maintain the exact amount of drawing tension throughout release.

If none of those factors account for your misdirection, check the spine of your arrows. A too-stiff arrow will generally shoot outside the line of the bow (to the right of a right-handed shooter). A too-weak arrow will go to the inside.

HOW TO ORDER

Wing orders are filled with all care and speed possible. To avoid delays, please check your order carefully before mailing to make sure you have furnished all catalog numbers and needed information. Prices are f.o.b. Jacksonville, Texas within U.S.A. for all orders of less than \$300.00. Orders in excess of \$300.00 are shipped f.o.b. destination within the continental U.S.A.

Your local Wing dealer takes pride in helping you select proper equipment. If no dealer is nearby, write us and we will direct you to the closest dealer.

MINIMUM ORDER: \$5.00
C.O.D. ORDERS — All orders will be shipped C.O.D. unless satisfactory credit has been established or full payment is sent with the order. All C.O.D. orders must be accompanied with a deposit of 25% of the total amount of the order.

RETURNED ITEMS — Wing Archery Company will not be responsible for any items shipped to the factory which are not covered by adequate insurance. In the case of insured items, Wing takes responsibility only to the extent of the insurance applicable to said items. A 10% service charge will be made on any items returned to Wing Archery Company for credit.

IMPORTANT: Restrictions on size and weight of Parcel Post packages do not apply on shipments to or from our mailing address — Wing Archery Company, Rt. 1, Jacksonville, Texas 75766.

BOW GUARANTEE

Every Wing Bow is numbered and accompanied by a registration card which must be filled out and mailed within 10 days after date of purchase. Should failure occur in a bow so registered, the Wing Archery Company will repair, or replace it if repair is not feasible, with the same model or the closest model available. If failure should occur within 6 months of the purchase date, replacement will be made at no charge unless models have changed or list prices have increased, in which case the customer will be charged for the difference in models or difference in list price. The bow must show no evidence of misuse or improper handling, and the serial number must be intact. After 6 months and up to 3 years, and provided

the bow has not been misused or mishandled, repair or replacement will be made for 50% of the list price at time of purchase unless models have changed or list prices have increased, in which case the customer will be charged for the difference in models or difference in list price. No adjustment will be made until the damaged bow is returned to the factory for inspection. Replacement will be made with a bow of the same model and weight, as near as possible. This guarantee is valid only when purchase has been made through an authorized Wing dealer. Dealers are not authorized to make adjustment, but will be glad to handle shipping and correspondence.
