

Environmental Canine Services LLC

Ship and Sniff!

A cost saving sample screening method

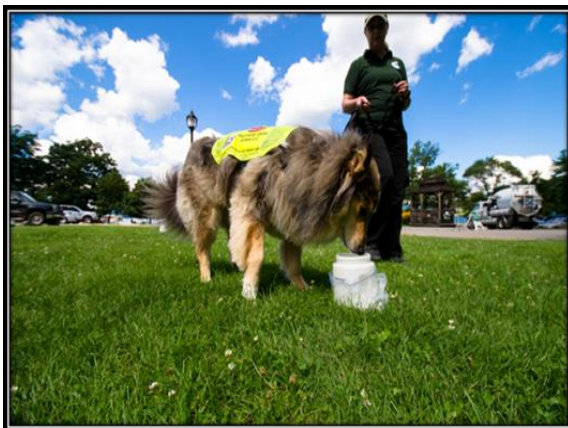

Advantages of *Ship and Sniff!*:

- Fast identification of “hotspots” of sewage contamination in surface water
- Significant cost-savings over lab testing for the presence of human DNA
- Quick turnaround time
- Flexible scheduling

How it works:

- You collect water samples and prepare them for shipping according to our quality control protocol.
- You ship them to us for canine scent testing.
- We include canine scenting of field blanks, sewage samples, and duplicate samples for quality control.
- You receive a report of the results quickly.

Canine scent testing of stormwater and surface water samples is a method developed by our company to identify the presence of sewage, which indicates the presence of harmful human pathogen pollution. The canines only alert to the presence of human source, not animal source waste, which can be helpful in planning source tracking efforts.

Pricing:

\$40 per sample plus you pay for the sample bottles and shipping costs. The costs can be minimal using USPS priority flat rate boxes.
