Cancellation deadline is Friday, April 10th.*

Location / Directions: Please see attachment "Meeting Location"

Avoiding Environmental Disaster-Encapsulation of an Existing Asbestos Coating

Darrell Wagoner
Western Regional Technical Manager,
The Trenton Corporation

Secondary field coatings applications are an extremely critical function in the effort to maintain the continued integrity and safety of a variety of metal pipes and their surfaces. Sometimes these repairs must be conducted under unique and often challenging conditions and there are no more challenging conditions than encapsulating an asbestos coated pipe in an environmentally protected and sensitive area. A case study from a recently completed Bay Area asbestos encapsulation project by the Trenton Corporation will be discussed.

Darrell Wagoner is the Western Regional Technical Manager for The Trenton Corporation. The Trenton Corporation has been a leader in the manufacturing of external anti-corrosion coatings for over 60 years and is an ISO-9000+ corporation. Darrell has a Bachelor's Degree in Chemistry from The University of California at Santa Barbara. He has spent his career managing air quality and water quality effluent streams as well the internal and external aspects of corrosion, bacteria, demulsification, and contaminant control from nuclear power plants to wineries. He is a member of NACE, AWWA, API, The Sierra Club, and The SurfRider Foundation. He can dance better than James Brown but lost most of his moves sometime in the late 80's.
