

## Can anyone say GUINEA PIG?

STAT, a health-oriented news website, reported today that Pfizer is seeking authorization for an updated COVID vaccine without updating or conducting trial data. In this article, Pfizer and the FDA have decided with its 'advisers' on a plan to approve booster shots before clinical data is available, because "enough is known about the Moderna and Pfizer/BioNTech platform to approve booster shots."

### ARE WE INSANE?

We now have two of those 'vaccine' shots and two boosters with emergency authorization to stop the spread; no, prevent the virus; no, keep you from dying; no, keep you from being hospitalized. ALL OF THE ABOVE, for a virus that is possibly fatal for those with co-morbidities, but 99+ percent survivable for the remainder of the population, and apparently does NOTHING to prevent contracting or spreading the virus.

We are still advertising shots for infants to adults, and the virus is still spreading with possibly over 90% of the population either vaccinated or having natural immunity. Two shots and two boosters have not prevented our idiot president, and equally idiot head of the NAID and PRIMARY presidential COVID advisor, from getting the virus, TWICE!

Are Americans that stupid?

This article points out that some "experts" disagree with the approach of authorizing a new 'vaccine' without adequate trials. It refers to an NPR piece indicating that John Moore, an immunologist with Weill Cornell Medicine, concluded that "mouse data are not going to be predictive in any way of what you would see in humans." It seems the FDA is perfectly satisfied that these companies can design life altering medicine that will save the planet's population from emerging infectious disease, which no doubt are being created now in labs funded by taxpayer dollars, with short cut methods that equate mice with people.

We have literally lost our minds. With (even suppressed) VAERS data showing thousands of injuries from these 'vaccines,' some glossed over in this article as simply affecting young men, like myocarditis, how is it that our TAX FUNDED FDA is satisfied that this new 'vaccine' is safe, OR NECESSARY? There are therapeutics out there to treat this virus. We don't need Pfizer and Moderna and the FDA creating new funding sources for the pharmaceutical industry using the entire American population as Guinea pigs.
