

Jessica Cole Training Stables

2018 HEALTH REQUIREMENTS

Due to the high-traffic nature of my training barn, it is essential that all incoming horses be healthy and fully vaccinated against all common communicable equine diseases.

On the recommendation of our veterinarian and for the protection of all customers and horses, the following vaccinations and test must be completed before the horse arrives.

Current year (2018) negative Coggins test

Current vaccinations:

Potomac Horse Fever

Four Way (Flu, EEE, WEE, Tetanus)

-OR

Nasal Flu and Three way

Rhinopneumonitis (Rhino)

Strangles (specify IM or nasal)

Rabies (also available as a 2-in-1 with Potomac vaccine)

West Nile Virus

Recommended but not required: Lyme disease. Contact JCTS for more information.

Dental Work:

Horses of all ages require periodic floating to remove sharp points from teeth to facilitate comfort while wearing the bridle and proper chewing and digestion. Horses 2, 3, and 4 years of age often also require removal of wolf teeth and caps in order to ensure comfort and cooperation while wearing the bridle. All necessary dental work will be brought up to date by Jessica Cole Training Stables' veterinarians if it has not been attended to prior to the horse's arrival.

All horses will receive vaccination and Coggins test updates as often as recommended by Jessica Cole Training Stables' veterinarians.

Deworming and dental work will also be kept up to date as needed.

**CLIENTS SHOULD FURNISH A COMPLETE HEALTH RECORD
WITH DATES OF ALL VACCINATIONS AND DEWORMINGS
FOR THE TWELVE MONTHS PRIOR TO THE HORSE'S ARRIVAL.**
