

Bet on Africa Priority in the Process of Internationalization of Sonangol

05/05/17

The bet in the African continent, in the next years, will be a priority in the process of internationalization of Sonangol, according to its executive administrator, João dos Santos.

The head of the Angolan oil company made this announcement in Houston at the end of the OTC Conference, which took place from 01 to 04, in which Sonangol participated for the first time with its subsidiaries.

"In principle, we have the idea to attend an event like this, on the African continent. There is a major conference at the end of the year in South Africa, where we will once again attend and hold workshops to try to internationalize our affiliates," he said.

He said he justified the bet on the continent because today the company does quality work, deliveries on time and with international safety standards recognized by its customers.

The company will direct its focus to countries in eastern and western Africa.

In relation to the event, João dos Santos said that this was a very well planned mission for the whole team, both Sonangol Holdings and subsidiaries, resulting in a success.

"We had a decent stand at the Conference that represented not only the companies but also Angola, its culture, people and deeds," he said.

In this sense, he argued that it was with great pleasure that he verified the good reception of the participants of the Conference when they visited the stand.

According to the manager of the oil company, this experience will be repeated since "we can not stop here", since both the presence on the stand and the workshops themselves were positive events.

He pointed out that Sonangol left the Offshore Technology Conference (OTC) with a lot of information because it was an activity in which people spoke openly, in a transparent way, and from that came the return to subsidiaries, partners and operators and even to its own ministry.

For this reason, he added, Sonangol feels very comfortable with the result of this participation.

The Offshore Technology Conference, established in 1969, brings together industry professionals and companies from all over the world for the exhibition and exchange of ideas in this field, specifically on the most advanced knowledge.

This year more than two thousand exhibitors will present the latest innovations in the technological field and address the market prospects.
