

Rabbit Anti-Beta-2-Microglobulin [MD24R]: RM0327, RM0327RTU7

Intended Use: For Research Use Only

Description: Component of the class I major histocompatibility complex (MHC). Involved in the presentation of peptide antigens to the immune system. Defects in B2M are the cause of hypercatabolic hypoproteinemia (HYCATHYP) [MIM:241600]. Affected individuals show marked reduction in serum concentrations of immunoglobulin and albumin, probably due to rapid degradation. Note=Beta-2-microglobulin may adopt the fibrillar configuration of amyloid in certain pathologic states. The capacity to assemble into amyloid fibrils is concentration dependent. Persistently high beta(2)-microglobulin serum levels lead to amyloidosis in patients on long-term hemodialysis.

Specifications:

Clone: MD24R
 Source: Rabbit
 Isotype: IgG
 Reactivity: Human, monkey
 Localization: Secreted, detected in serum and urine
 Formulation: Antibody in PBS pH7.4, containing BSA and $\leq 0.09\%$ sodium azide (NaN₃)
 Storage: Store at 2°- 8°C
 Applications: IHC, Flow Cyt., ICC/IF, WB
 Package:

Description	Catalog No.	Size
Beta-2-Microglobulin Concentrated	RM0327	1 ml
Beta-2-Microglobulin Prediluted	RM0327RTU7	7 ml

IHC Procedure*:

Positive Control Tissue: B-cell lymphoma / amyloid
 Concentrated Dilution: 200-300
 Pretreatment: Citrate pH6.0 or EDTA pH8.0, 15 minutes using Pressure Cooker, or 30-60 minutes using water bath at 95°-99°C
 Incubation Time and Temp: 30-60 minutes @ RT
 Detection: Refer to the detection system manual
 * Result should be confirmed by an established diagnostic procedure.

FFPE human colon carcinoma stained with anti- β 2-microglobulin using DAB
