DON'T FORGET YOUR 2ND APPLICATION OF MERIT GRUB CONTROL

The Japanese beetles have laid their eggs and they will start hatching in August. The best defense is to stop them before they have an opportunity to grow. Spread Award with Merit Grub control on your lawn. As the larvae emerge from the eggs the pests have the least amount of resistance to pesticides. The new grubs will start feeding on plant and lawn roots. Merit attacks the central nervous system of the grub, causing paralysis and death. Remember, if you get rid of the grubs, you also cut off the food supply to the moles. This application can help prevent mole issues in the spring!

Best Time To Apply

Use Award with Dimension Crabgrass preventer in the Fall to winter kill the crabgrass, then follow-up in the Spring with our 4 Step Lawn Care Program.

Soil First[®] PREMIUM COVER CROP SEED

UNCOVER THE TRUE COST OF YOUR FALL RYE

You may be tempted to cut corners on fall rye by settling for cheaper seed. But cheap seed does not mean lower overall cost. When evaluating options pay attention to purity and germination – less pure live seed can cost you more than anticipated. Guardian[®] is not only a quality assured product, it can also save you money this fall.

HIGHER QUALITY = LESS COST

PLANT MORE ACRES WITH QUALITY SEED!

Guardian Fall Rye Now Available - \$18.50/56# Bag

Food Plot 101: Fall Season Do's & Don'ts

DO – Check your pH level to make sure your levels are adequate to carry the nutrients to the plants you are growing. Keep in mind, different plants thrive at different pH levels. We do carry the small self-test kits for under \$6.

DON'T – Pair up plants that require different pH levels, unless one of them is tolerant to a variable level, such as Rye.

DO – Get rid of the weeds.

DON'T – Disk and then spray your weeds. Don't disk or fertilize until the weeds are dead; this may take up to 2 weeks.

DO – Follow recommendations on the chemical bottle for mixing concentrates.

DON'T – Use more than the recommendations on the chemical bottle.

DO – Fertilize with the proper fertilizer, in the proper amounts. Refer to your soil test or basic guidelines for crop to be grown.

DON'T – Spread more than you need or if you have been told to use a 10-10-10, don't use a 17-17-17 thinking that bigger is better – It's NOT!

DO – Follow the rate of seed application on our planting chart. Seed on the light side of the chart and only over-seed areas that didn't come up, or were too thin. Over-seed bare spots at half the rate of seed recommended.

DON'T – Over-seed!!! This is likely the biggest issue for poor production; seeds will come up nice, and then stop growing, because the plants will choke themselves off.

Check your soil in between soil tests for under \$6.00. 10 tests included; 4 for pH, 2 each for Nitrogen, Phosphorus & Potassium.

The Spartan Mosquito Eradicator takes 10 minutes to set up. Extremely effective. Significantly decreases population within 15 days. Provides up to 95% mosquito control for up to 90 days.
