**** Many on the course were misdirected and ran a 2.85 mile (obtained from 2 separate runners who had Garmins) race and should adjust your times. In the results for overall winners you will see adjusted times for those who ran the course short. To achieve an accurate adjusted time for each individual, we took their finish time for the 2.85 miles, multiplied the minutes by 60 the added the odd seconds for an overall finish time in seconds, then divided that time by the 2.85 miles run (average seconds per mile), then dived that by 4 (the misdirected course was .25 miles short) and added that time to the recorded finish time.**

Example: Cary Allen was 1st runner through chute but had run the short course in a finish time of 16:39.

-16 minutes x 60 seconds per minute = 960 seconds

- 39 seconds (16:39) + 960 seconds = 999 seconds

- 999 seconds / 2.85 miles = 351 seconds per mile

- 351 seconds / 4 (course was .25 miles short) = 88 seconds to be added

- 16:39 (chute finish time) + 88 seconds = 18:06 Official 5K time based on run pace
